DESCRIPTORS	Adult Education; Data Analysis; *Data Collection; *Day Care; *Early Childhood Education; Elementary Secondary Education; Interviews; National Surveys; *Parents; Research Design; *Research Methodology; Research Utilization; *Sampling; Telephone Surveys; User Needs (Information)
IDENTIFIERS	*National Household Education Survey; Statistical Analysis System

ABSTRACT

The 1995 National Household Education Survey (NHES:95) was a random digit dial telephone survey of households developed by the National Center for Education Statistics. The NHES:95 included two topical survey components: the Adult Education component, which collected information about adults' participation in adult education, and the Early Childhood Program Participation (ECPP) component, which collected information about children's participation in nonparental child care and early childhood programs. This manual provides documentation and guidance for users of the public release data file for the ECPP component. Information about the purpose of the study, the data collection instruments, the sample design, and data collection and data processing procedures is provided. Some information about factors that should be kept in mind when using ECPP data is also provided. For the ECPP component, interviews were conducted with parents of 14,064 children, a figure that included 101 home schooled children. Four appendixes present screening and study questionnaires, information about the file layout, the Statistical Analysis System code for derived variables, and the ECPP codebook. (Contains 8 tables, 2 figures, and 23 references.) (SLD)

The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

1. INTRODUCTION

The 1995 National Household Education Survey (NHES:95) was a random digit dial (RDD) telephone survey of households developed by the National Center for Education Statistics (NCES) and conducted by Westat, Inc. The NHES:95 included two topical survey components; one called the Adult Education (AE) component which collected information about adults' participation in adult education and another called the Early Childhood Program Participation (ECPP) component which collected information about children's participation in nonparental child care and early childhood programs.

This manual provides documentation and guidance for users of the public release data file for the ECPP component of the NHES:95. Information about the purpose of the study, the data collection instruments, the sample design, and data collection and data processing procedures is contained in this manual. Also contained is some information regarding factors that should be kept in mind when analyzing the ECPP data.

For the ECPP component, interviews were completed with parents of 14,064 children -- 4,135 infants and toddlers, 3,431 preschool children, 1,680 kindergarten children, 4,717 primary school children, and 101 home school children. Data were collected from January through April 1995.

1.1 Background of Study

The legislative mandate of NCES is to collect and report information on the condition of education in the United States. In responding to this mandate, NCES historically collected data primarily from teachers, students, schools, school districts, and state education agencies. The National Household Education Survey is a data collection program that permits NCES to go beyond its traditional, school-based data collection systems to a household-based data collection, thereby greatly expanding the scope of issues that can be covered by the data collection activities of the Center. A household survey has the potential to provide data to address many current issues in education such as preprimary education, school safety and discipline, adult education, and activities related to citizenship.

The Field Test of the NHES was conducted by Westat for NCES in the fall of 1989. This first effort, which included the screening of about 15,000 households, comprised two topical components: school dropouts (interviews were conducted with adult household respondents and 14- to 21-year-old youth) and early childhood education (interviews were conducted with parents/guardians of 3- to 5-year-olds). The design of the field test and the results of the field test data collection activities are described in an *Overview of the NHES Field Test* (Brick et al. 1992).

The first full-scale implementation of the NHES was conducted in the spring of 1991 (NHES:91). The topical components in the survey were early childhood education for 3- to 8-year-olds and participation in adult education. For the NHES:91, more than 60,000 households were screened, nearly 14,000 early childhood education interviews were conducted with the parents/guardians of eligible children, and about 12,500 interviews were conducted with adults regarding participation in adult education activities. More information about these data can be found in the *NHES:91 Preprimary and Primary Data Files User's Manual* (Brick et al. 1992) and the *NHES:91 Adult and Course Data Files User's Manual* (Brick et al. 1992). NCES reports using these data include *Profile of Preschool*

Children's Child Care and Early Education Program Participation (West et al. 1993) and *Adult Education Profile for 1990-91* (Korb et al. 1991).

The NHES was again conducted in 1993, addressing the topics of readiness for school and safety and discipline in school. The NHES:93 early childhood component focused on readiness for school in a broad sense and examined several relevant issues, such as experience in early childhood programs, the child's accomplishments and difficulties in several developmental domains, early home activities, and delayed kindergarten entry. For the School Readiness component, parents of 10,888 children aged 3 through 7 or in 2nd grade or below were interviewed. The School Safety and Discipline component of the NHES:93 focused on four areas: school environment, school safety, school discipline policy, and alcohol/other drug use and education. Parents of 12,680 children in 3rd through 12th grades were interviewed, as were 6,504 students in 6th through 12th grades. More information about these data can be found in the *NHES:93 School Readiness Data File User's Manual* (Brick et al. 1994) and the *NHES:93 School Safety and Discipline Data File User's Manual* (Brick et al. 1994). NCES reports using these data include *Approaching Kindergarten: A Look at Preschoolers in the United States* (Zill et al. 1995) and *Parent and Student Perceptions of the Learning Environment at School* (Chandler et al. 1993).

1.2 NHES:95 Survey Topics

The NHES:95 addressed participation in nonparental child care and early childhood programs as well as participation in adult education. These topics are related to two of the eight National Education Goals. Specifically, Goal 1 states that "By the year 2000, all children in America will start school ready to learn." Goal 6 states that "By the year 2000, every adult American will be literate and will possess the knowledge and skills necessary to compete in a global economy and exercise the rights and responsibilities of citizenship."

Early Childhood Program Participation (ECPP) Component

As noted above, the NHES has included topical components related to early childhood education beginning with the 1989 Field Test. The NHES:95 early childhood component focused on children's early experiences in various types of nonparental child care arrangements and early childhood programs. The core of this survey collected extensive information on children's participation and experiences in four types of nonparental care and programs: care by relatives (not including parents), care by nonrelatives, Head Start programs, and other center-based programs. Other information collected in this component pertains to children's kindergarten and primary school experiences, children's personal and household demographic characteristics, parent/guardian characteristics, literacy-related home activities, and children's health and disability statuses. Altogether, interviews were completed for 14,064 children who were newborn through age 10 and in 3rd grade or below. This includes interviews for 4,135 infants and toddlers, 3,431 preschool children, 1,680 kindergarten children, 4,717 primary school children, and 101 home school children.

Adult Education (AE) Component

The NHES:95 Adult Education component focused on the participation of adults (aged 16 years and older) in a wide range of educational activities during the 12 months prior to the interview. Respondents were asked about their participation in seven broadly defined types of adult education activities: adult basic skills and GED preparation classes, English as a Second Language instruction, courses taken toward college degrees or vocational diplomas or certificates, apprenticeship programs, career or job-related courses, any other formal structured courses, and computer-only or video-only instruction on the job. The AE component also collected data pertaining to reasons for and barriers to participation in adult education. In all, 19,722 adult interviews were completed: 11,713 with adult education participants and 8,009 with nonparticipants. A complete description of the AE component can be found in the *NHES:95 Adult Education Data File User's Manual* (Collins et al. 1996).

1.3 Overview of Design

The NHES:95 was developed to provide reliable national estimates from both the AE and ECPP components. More than one population and set of issues were addressed concurrently in the NHES:95 because of the high costs associated with screening large numbers of households in order to meet the sample size requirements for precise estimates. This strategy is key to the NHES design. By including more than one topic within the framework of a single survey, the cost of screening households to find those eligible for the study could be partitioned over the two component surveys.

Another general feature of the NHES was developed in response to concerns about the burden placed upon those who respond to multiple survey components. With the introduction of multiple surveys within a single framework, the possibility of increasing response burden on the members of the sampled households arose. It is possible that the same household member could be selected to respond to more than one interview and/or that more than one household member could be sampled. For the ECPP interview, if there were one or two eligible children in the household, those children were sampled for the survey. If the household included more than two eligible children, two children were sampled from that household, with kindergartners sampled at a higher rate to improve single-year-of-age estimates for these children. For the AE interview, one adult per household was sampled unless the household contained rare subgroups, such as adult education participants with low educational attainment, in which case up to two adults per household were sampled. Since households may have had up to two ECPP interviews and up to two AE interviews, the maximum number of interviews per sampled household was four. (See chapter 3 for a detailed discussion of sampling procedures for the NHES:95.)

Even though sampling methods reduced the number of interviews per household, the length of the interview was considered to be a critical factor in obtaining high response rates and reliable estimates. Therefore, the number of items included in the NHES:95 was limited in order to help improve response rates and reduce the demands made on survey respondents. The average administration time for the ECPP component was 12.6 minutes; for the AE component it was 13.9 minutes.

Because of the above requirements, complex sampling techniques, and the need for quick and accurate administration, the NHES:95 was conducted using computer-assisted telephone interviewing (CATI) technology. Some of the advantages of CATI for the NHES:95 included improved project administration, online sampling and eligibility checks, scheduling of interviews according to a priority scheme to improve response rates, managing data quality by controlling skip patterns and checking responses online for range and consistency, and an online "help" function to answer interviewers' questions.

Five different interview instruments were used in the NHES:95. These instruments were the Basic Screener, the Expanded Screener, the ECPP interview, the AE interview, and the AE Splice interview. The Basic and Expanded Screeners were two different household screening interviews that were used to sample household members for the ECPP and AE interviews; they are discussed in detail along with the ECPP interview in chapter 2. The AE Splice interview was used for a special methodological test and is discussed in the separate Data File User's Manual for the AE component. Items within each of the five NHES:95 instruments were programmed so that the appropriate items appeared on the interviewer's computer screen corresponding to the respondent's answers to previous questions.

Table 1-1 summarizes the number of completed interviews and response rates for the Basic and Expanded Screeners, ECPP, and AE components. More details on the computation of these rates are given in chapter 4.

Table 1-1.--Summary of completed interviews and completion and response rates

Interview type	Number of completed interviews	Completion rate[1]	Response rate[2]
Basic Screener	43,987	73.3	73.3
Expanded Screener	1,478	73.2	73.2
Early Childhood Program Participation	14,064	90.4	66.3
Adult Education	19,722	80.0	58.6
Adult Education Splice	3,569	87.3	64.0

[1] The completion rate is the percentage of completed interviews for a specific stage of the survey (i.e., the household screening stage or the AE or ECPP interview stage). It is a ratio of the number of completed interviews to the number of units (e.g., households, household members) sampled for the interviews. The completion rates presented are weighted.

[2] The response rate indicates the percentage of possible interviews that have been completed, taking all sampling stages into account. It is the product of the Screener completion rate and the completion rate for the AE or ECPP interview. The response rate and completion rate are identical for the first stage of sampling and interviewing (i.e., the Screener). The response rates presented are weighted.

SOURCE: U.S. Department of Education, National Center for Education Statistics, National Household Education Survey, spring 1995.

1.4 Flow of the Interviews

Figure 1-1 shows the flow of the NHES:95 interviews. Each household contact began with a Screener interview (either a Basic or Expanded Screener), which obtained information used to sample adults and children for extended interviews. (The term "extended interview" refers to the topical components of the study, that is, the ECPP or AE interviews.) The information gathered in the screening interview pertained to household membership, school enrollment, educational attainment, and adult education participation. The Expanded Screener included questions beyond those needed to sample subjects for the study, and was included in the NHES:95 as a feasibility test of a means of collecting additional information about household members who may not be sampled for AE or ECPP interviews. (The Expanded Screener is discussed further in chapter 2.)

If the household contained any 0- to 10-year-olds in 3rd grade or below, up to two ECPP interviews were conducted with the parent or guardian most knowledgeable about each child's care and education. Any adults aged 16 or older and not enrolled in elementary or secondary school who were sampled for the AE interview responded to the interviews themselves.

Whenever possible, all interviews with household members were conducted during the same telephone call as the Screener, starting with any AE or ECPP interviews for which the Screener respondent was the appropriate extended interview respondent. Followup calls were made to complete interviews not completed during the initial contact.

1.5 Contents of the Manual

The chapters that follow provide additional information about the survey instruments (chapter 2), the sample design and estimation procedures (chapter 3), data collection and response rates (chapter 4), data preparation (chapter 5), and the use of the ECPP data file and codebook (chapter 6). Data considerations and anomalies identified in the data are highlighted in chapter 7. The appendices provide a copy of the Basic and Expanded Screeners and the ECPP questionnaire, the public file layout, the SAS code used to create composite variables, and the codebook for the ECPP data file.

2. DESCRIPTION OF DATA COLLECTION INSTRUMENTS

The sections that follow describe the questionnaires used to collect data for the ECPP component of the NHES:95. Included are descriptions of the Basic and Expanded Screeners and the ECPP interview. Appendix A contains a copy of each instrument.

2.1 The NHES:95 Basic and Expanded Screeners

The purpose of the screening interview in the NHES:95 was to gather information needed to sample household members to be AE or ECPP interview subjects. The NHES:95 Basic Screener served this purpose. In addition, an alternative screening instrument that collected information beyond that needed to sample subjects for extended interviews was also tested in the NHES:95. An Expanded Screener was tested in a small number of households (approximately 2,000) to evaluate the possibility of using screening interviews to collect data on standard education and sociodemographic characteristics of households, as well as on a key topical issue in education (e.g., use of public libraries). Therefore, while the vast majority of ECPP interviews were preceded by the Basic Screener interview, some received the Expanded Screener test instrument. Both screening instruments are discussed in detail below. However, please note that throughout this manual, unless otherwise noted, the term "Screener" refers to the screening interview in general (either the Basic or Expanded Screener).

Basic Screener

The purposes of the NHES:95 Basic Screener were to determine whether sampled telephone numbers belonged to households and to collect information required for sampling household members for extended interviews. The Basic Screener was designed to accomplish these tasks efficiently, placing minimum burden on the respondent.

The Basic Screener questionnaire was designed to flow smoothly through the following steps:

- Explain the purpose of the call;
- Determine if the telephone number reached was used for residential or both residential and business purposes;
- Verify that the Screener respondent was an adult member of the household;
- Identify all persons who resided in the household and obtain their ages and genders;
- Gather information needed for sampling subjects for extended interviews (e.g., school enrollment status, current grade, high school completion status, adult education participation status); and
- Determine the adult household member most knowledgeable about each sampled child, and determine the relationship of that person to the child.

The first series of questions in the Basic Screener determined whether the phone number was residential and whether the person on the telephone was eligible to answer the questions. If it was determined that the phone number was used for business only, the call was terminated. The survey continued for numbers that were for household use or for both business and household use.

If the person who answered the telephone was not a household member or was a household member under 18 years of age, an appropriate Screener respondent was requested. If no member of the household was 18 years old or older, a person designated as the male or female head of household was eligible to be the Basic Screener respondent.

Once an appropriate Basic Screener respondent was on the telephone, the entire household was enumerated. The enumeration involved collecting the first name, age, and gender for each household member. Basic Screener questions directly following the enumeration determined whether any household members were sampled for the study. The questions asked whether children or youth ages 3 to 10 or 16 to 19 in the household were attending a school or being home schooled, and the grade or year of school in which they were enrolled. Questions also inquired about the high school completion status and adult education participation status of household members aged 16 or older and not currently enrolled in grade 12 or below. If no household members were selected for extended interviews, the screening was terminated.

The final series of Basic Screener items were administered if children were sampled for ECPP interviews and if any adult sampled for an AE interview aged 16 to 25 was enrolled in college, graduate school, or vocational/technical school. For children sampled for the ECPP interview, the final Basic Screener questions recorded the parent or guardian in the household who was the most knowledgeable about the sampled child's care and education, and that person's relationship to the sampled child. The parent or guardian who was identified as the most knowledgeable was designated the respondent for the ECPP interview about the sampled child. For 16- to 25-year-olds enrolled in postsecondary school and sampled for the AE interview, the final questions determined whether these persons were living in the sampled household, in student housing, in another private home or apartment, or in an institution or group quarters. Those living in another private home or apartment were ineligible for the survey because they had their own probability of selection in their own household. Those living in an institution or group quarters also were ineligible for the survey because the NHES is a survey of households and these living arrangements do not qualify as households. Those living at the sampled household or in student housing were eligible. The last names and telephone numbers of those living in student housing were obtained so they could be contacted at their student housing for the interviews.

Expanded Screener

Many NHES screening interviews are done in households in which no person is sampled for extended interviews, therefore yielding no data that are useful for analysis purposes. The NHES:95 Expanded Screener was included as a feasibility test of a means of collecting information about households and household members who may not be sampled for extended interviews. A relatively small number of households received the Expanded Screener (4,040 telephone numbers were sampled; 1,962 residential phone numbers were identified, and 1,478 Expanded Screeners were completed).

The Expanded Screener contained the same questions used in the Basic Screener to identify appropriate Screener respondents, to enumerate household members, and to sample household members for extended interviews. However, the Expanded Screener also contained questions that gathered information on some educational and sociodemographic characteristics of all household members including school enrollment status, educational attainment, marital status, race and ethnicity, languages first spoken and languages spoken in the home. It also contained items gathering some household-level information, including household income and whether the home is owned or being rented. Also included were questions related to a current educational issue -- household members' use of public libraries.

For this test, four different versions of the Expanded Screener were administered. These versions differed in the subsets of questions that were asked in addition to the Basic Screener questions. For example, some households received the questions gathering sociodemographic information, but did not receive questions pertaining to household members' use of public libraries; other households received both sets of items. Because this was a test instrument, data particular to the Expanded Screener are not included in the public release file or the proprietary file (see section 6.3 for a brief discussion of the ECPP proprietary data file).

2.2 Early Childhood Program Participation (ECPP) Interview

In the NHES:95 ECPP interview, data were collected about children who were newborn through age 10 as of December 31, 1994 and in third grade or below at the time of the interview. Children aged 7 or older and not enrolled in school and not being home schooled were not eligible for the study.

Table 2-1 shows the overall structure of the interview and the distribution of topics among the three major groups of children that were of interest in this survey. The respondent was the adult living in the household who was the most knowledgeable about the child's care and education. Typically, this was the mother of the child; however, depending on the situation, the respondent could be a father, stepparent, adoptive parent, foster parent, grandparent, another relative, or nonrelative guardian. For simplicity, when referring to the most knowledgeable respondent in the manual, this person will be called the parent/guardian.

In the ECPP interview, subjects were routed to one of five questionnaire paths: infant/toddler, preschool, kindergarten, primary school, or home school. The **infant/toddler path** was for all children who were newborn to 2 years old. For these children, information was collected pertaining to participation in nonparental child care arrangements (i.e., care by relatives, care by nonrelatives, and participation in center-based early childhood programs), parent preferences for child care arrangements, the continuity of child care arrangements since September 1994, reading at home by family members, health and disability, parent or guardian characteristics, and household characteristics.

The **preschool path** was for those children who were age 3 or older and not yet attending kindergarten or primary school. These children were typically 3 to 5 years old. Information was collected about enrollment in school (this includes nursery school, preschool, prekindergarten, and Head Start programs); participation in relative care, nonrelative care, Head Start programs, and center-based early childhood programs; parent preferences for child care arrangements; the continuity of child care arrangements since September 1994; literacy related activities; health and disability; parent or guardian characteristics; and household characteristics.

Table 2-1.--NHES:95 Early Childhood Program Participation interview content by major path

Infant/Toddler path	Preschool path	Kindergarten and Primary School paths
Introductory information: birth date, race/ethnicity, child's language, household member relationships	Introductory information: birth date, race/ethnicity, child's language, household member relationships	Introductory information: birth date, race/ethnicity, child's language, household member relationships
	School status	School status
		School history and experience
Relative care programs	Relative care programs	Relative care programs
Nonrelative care programs	Nonrelative care programs	Nonrelative care programs
	Head Start programs	Head Start programs (prior to kindergarten)
Center-based programs	Center-based programs	Center or before/after school programs
Parent preferences	Parent preferences	Parent preferences
		Self-care
Continuity	Continuity	Continuity
Reading at home	Literacy activities	Literacy activities
Child health and disability	Child health and disability	Child health and disability
Parent/guardian characteristics	Parent/guardian characteristics	Parent/guardian characteristics
Household characteristics	Household characteristics	Household characteristics

The **kindergarten path** and the **primary school path** were very similar. Children following the kindergarten path include those currently attending kindergarten, including transitional kindergarten and prefirst grade. As defined in the NHES, transitional kindergarten is a program before regular kindergarten for children who are old enough for kindergarten but not yet ready to start. Prefirst grade is an extra year between kindergarten and first grade. These children are typically 5 or 6 years old. The **primary school path** was for those children currently attending first, second, or third grade. These children were typically 6 to 9 years old.

In the kindergarten and primary school paths, data were collected about enrollment in school and experience with home schooling; experiences in the kindergarten currently attended or attended before entering first grade; experiences in primary schools currently attended; current participation in relative care, nonrelative care, and center-based early childhood programs; past participation in Head Start; parent preferences for child care arrangements; self care among primary schoolers; the continuity of child care arrangements since September 1994; literacy-related activities; health and disability; parent or guardian characteristics; and household characteristics.

The **home school path** was administered for those children who were not attending school but were being instructed at home with a grade equivalent of kindergarten through third grade. (Those with a grade equivalent of nursery school were assigned to the preschool path.) This path was for children who were age 5 or older. In general, home schoolers followed the same path as the kindergartners and primary schoolers, except some sections of the questionnaire were skipped for home schoolers: children's school experiences in kindergarten or primary school, and self care. The number of children who followed the home school path is relatively small compared to the other paths.

To avoid redundancy and increased response burden, household information was collected only in the first interview conducted in each household. Similarly, parent information was collected only once per household, unless sampled children in the same household had different parents.

2.3 Authorship of the ECPP Questionnaire

The ECPP questionnaire was designed by Mary Collins, Laura Loomis, and Nicholas Zill of Westat; Sandra Hofferth of the Institute for Social Research at the University of Michigan; and Kathryn Chandler and Jerry West of NCES. They received advice and guidance from a Technical Review Panel. Panel members were Steven Barnett, Rutgers University; Rosalind Bruno, U.S. Bureau of the Census; Doris Roberts Entwisle, Johns Hopkins University; Luis Laosa, Educational Testing Service; Douglas Powell, Department of Child Development and Family Studies, Purdue University; Jeff Evans, Center for Population Research, National Institute of Child Health and Human Development, U.S. Department of Health and Human Services; and Gerry Hendershot, National Center for Health Statistics, U.S. Department of Health and Human Services.

3. SAMPLE DESIGN AND IMPLEMENTATION

This chapter describes the sample design for the NHES:95, including a number of special features of the design. Also presented are the procedures for weighting to national estimates, imputation for items that had missing values, and variance estimation.

3.1 Sampling Households

Different methods have been developed over the years for selecting random samples of telephone households. The Mitofsky-Waksberg method of random digit dialing as described in Waksberg (1978) is probably the best known of the methods. For the NHES:91 and the NHES:93, a modified Mitofsky-Waksberg method described by Brick and Waksberg (1991) was used. The NHES:95 used a different approach to RDD sampling, called a list-assisted method. This method reduces the number of unproductive calls to nonworking or nonresidential numbers (compared with simple random sampling of all numbers), produces a self-weighting sample, is a single stage and unclustered sample, and eliminates the sequential difficulties associated with the Mitofsky-Waksberg method. The major disadvantage of this method is that it incurs a coverage bias because not all telephone households are included in the sampling frame.

The list-assisted sampling used in the NHES:95 was conducted by stratifying telephone numbers by the type of 100-bank they fall within (all the numbers in a 100-bank have the same first 8 digits of the 10-digit telephone number). An equal probability random sample of telephone numbers was selected from all possible telephone numbers that were in 100-banks with at least one White Page directory-listed telephone number (called the listed stratum). Telephone numbers in 100-banks with no listed telephone numbers (called the zero-listed stratum) were not sampled. The telephone numbers in the listed stratum included both listed and unlisted numbers.

A coverage bias arises because households in the zero-listed stratum have no chance of being included in the sample. Empirical findings were presented by Brick, Waksberg, Kulp, and Starer (1995) to address the question of coverage bias. These results show that the percentage of telephone numbers in the zero-listed stratum that are residential is very small (about 1.4 percent), and about 3 to 4 percent of all telephone households are in the zero-listed stratum. Furthermore, the bias resulting from excluding the zero-listed stratum is generally small.

The sampling frame for the NHES:95 was all telephone numbers in 100-banks with one or more listed telephone numbers as of December 1994. An important goal of the NHES:95 was to produce reliable estimates for subdomains defined by race and ethnicity. To accomplish this goal, telephone numbers in areas with high percentages of blacks and Hispanics were sampled at higher rates. The sampling frame used in the study contained the 1990 census counts of the percentage of persons in the area by race and ethnicity. The 100-banks were classified in the high minority concentration stratum if at least 20 percent of its population was black or at least 20 percent was Hispanic. The banks that did not meet this requirement were classified in the low minority concentration stratum. The sampling rate in the high minority concentration stratum was twice that of the low minority stratum.[1]

A sample of 133,874 telephone numbers was selected for the NHES:95, but not all these telephone numbers were actually used, as described below. The sampled 133,874 telephone numbers were randomly allocated to the AE Splice sample (n = 10,620), the Expanded Screener sample (n = 4,040), and the regular Basic Screener sample (n = 119,214). The telephone numbers in the regular sample were then divided into random subsets for data collection. A decision was made during data collection to reduce costs by eliminating a random subsample of 13,415 telephone numbers from the regular sample. Thus, a total of 120,459 sampled telephone numbers was used in the data collection. Of this total, 62,984 numbers were sampled from the high minority strata, including 5,553 in the AE Splice Sample and 2,112 in the Expanded Screener sample. Screening interviews were completed if the sampled telephone number was residential and the respondent agreed to participate in the survey. The number of households with completed screening interviews was 45,465. There was an expectation that 120,459 telephone numbers would have resulted in 56,760 completed Screeners. The lower than anticipated response rate was the main reason this number of Screeners was not achieved.

3.2 Sampling Within Households

Once the enumeration of the household members was completed in the Screener, the sampling of members for the extended interviews was done by computer. The interviews for the ECPP component were conducted with parents/guardians of sampled children who were newborn to 10 years old and in third grade or below.[2] In households with one or two eligible children, all the children in the household were sampled. If there were more than two eligible children in the household, two were sampled from the household. In these households, children in kindergarten were sampled at a higher rate than other children (a rate of 1.5 times the rate applied to other children) to improve the precision of the estimates for this important analysis domain. The within-household sample size was limited to two eligible children to limit the amount of time required to interview parents in households with a large number of eligible children.

Estimates from the October 1992 Current Population Survey (CPS) indicated that 13.5 percent of all households have exactly one child from birth to third grade (and age 10 or younger), and 10.3 percent of all households have two or more children from birth to third grade (and age 10 or younger). Based on these estimates, a sample of about 15,500 children (45,465 x {.135 + 2 x .103} = 15,500) was expected from 45,465 screened households. Assuming an ECPP interview completion rate of about 90 percent, the expected number of completed interviews for the ECPP component with a sample of 15,500 was about 13,950. In fact, 15,573 eligible children were sampled and the actual number of completed ECPP interviews was 14,064.

---

[1] Research was done for the NHES Field Test of 1989, the NHES:91, and the NHES:93 that tested the effects of different sampling plans and definitions of high minority strata on sample sizes and variances of estimates. This research led to implementing the procedures just described for oversampling telephone numbers in high minority areas. This design improves the precision for estimates of blacks and Hispanics and allows the overall estimates to be as precise as possible, given the constraints of oversampling minority areas.

[2] Only those persons who met the age limits were asked the question about grade in the Screener. The October 1992 Current Population Survey shows that by having an upper age limit of 10, only 0.1 percent of children enrolled in nursery school through third grade would be excluded. These are children who are older than 10, but still enrolled in third grade or below. Only 0.3 percent of all third graders are excluded by this upper age limit.

3.3 Weighting Procedures

The objective of the NHES:95 is to make inferences about the entire civilian, noninstitutionalized population for the domains of interest. Although only telephone households were sampled, the estimates were adjusted to totals of persons living in both telephone and nontelephone households derived from the Current Population Survey (CPS). Beginning in 1994, the CPS used totals of the number of persons that were adjusted to account for the undercoverage from the 1990 decennial Census. Much of the undercoverage was in urban areas and was disproportionately among racial and ethnic minorities. Any additional undercoverage in the CPS of special populations, such as the homeless, remains in these totals. The weighting procedures are described briefly below. More complete details are presented in a Working Paper entitled *Unit and Item Response Rates, Weighting, and Imputation Procedures in the 1995 National Household Education Survey* (Brick and Broene forthcoming).

The first step was the weighting associated with the sample of telephone numbers. A household weight was developed to account for the RDD sampling of telephone numbers, including the sampling rate differences by minority concentration strata. This weight was then adjusted for households that had more than one telephone number, hence more than one chance of being included in the sample. The final adjustment was made in the household weights to account for the fact that not all households responded. Nonresponse adjustment cells were defined based on the characteristics of the areas served by the telephone exchange. More specifically, the adjustment cells were based on a cross-classification of the following variables: metropolitan status, census division, percent renters, percent owner occupied, percent college graduates, median income, percent black, percent Hispanic, and percent age 0 to 17. The adjustments were defined as the inverse of the response rates for the cells. The household weight was used as a base weight for the subsequent weighting steps.

The next weighting procedures resulted in person-level weights, i.e., weights used to estimate the number of persons. These methods included the adjustment of the estimates to independent totals from the CPS. The person-level weighting procedures are described below.

Person Weights

Two weighting schemes were used for the ECPP: one for children age 0 to 8 years old, and one for children ages 9 and 10. A separate weighting scheme was used for 9- and 10- year-olds because only a fraction of these older children were eligible to be included in the study (because of the grade criteria of third grade or below). Again, more complete details are presented in a Working Paper entitled *Unit and Item Response Rates, Weighting, and Imputation Procedures in the 1995 National Household Education Survey* (Brick and Broene forthcoming).

As described earlier, every household with children in the eligible age and grade ranges was sampled. All children between the ages of 0 and 10 years old and in grade 3 or below were eligible. The sampling was done using information collected in the screening interview from the adult household member answering the telephone, and the eligibility of the sampled children was later verified or updated when the parent/guardian most knowledgeable about the child responded to the extended interview. For sampling and weighting purposes, sampling eligibility is defined in terms of the data collected at the Screener. The weighting procedures were developed with this possible misclassification taken into account so that the estimates would be unbiased.

The weighting procedures were different depending on the age of the child. First, the procedure is described for children up to age 8. The steps for 9- and 10-year-old children are described later. The first step in developing the person weights was to adjust the household weights for the probability of sampling the child from the household. For example, if there were two children in the household both were sampled and the sampling adjustment was 1.0. If there were three children in the household (none in kindergarten), then two were sampled and the sampling adjustment was 1.5, which is the inverse of the probability of selecting the child from the household. It should be noted that adjustments were more complex when there were three or more children in the household and one or more was in kindergarten. The person-level weighting adjustment for the probability of sampling the child from the household was then multiplied by the household weight to create a person level weight.

The final stage of weighting involved raking the person weights to the percentage distributions from the October 1993 CPS using the total number of persons from the February 1995 CPS. Because of the high completion rate for the ECPP component, no additional nonresponse adjustments were made before raking. Raking is an iterative procedure that ensures that survey weights sum to known population totals. It is a calibration estimator and closely related to poststratification. The main purpose of the raking was to adjust for undercoverage of persons who lived in households without telephones.

The raking was done to three dimensions: the first dimension was defined by the cross of race/ethnicity and household income; the second dimension was defined by the cross of Census region and urbanicity; and, the third dimension was defined by home type (owned or rented). The control totals for children 8 years old or less are given in table 3-1.

These same procedures could not be followed for 9- and 10-year-old children because control totals for children this age and enrolled in third grade or less were not available from the CPS. For 9- and 10-year-old children, the first step was to poststratify all the children enumerated in the sampled households to the control totals shown in table 3-2. These are totals of all 9- and 10-year-old children by age and Census region from the same CPS files mentioned above. The next step was to adjust the weights of the sampled persons by the probability of selecting the person as described above for younger children. At this stage, the weights of those not sampled or not eligible were set to zero. The sum of the weights for the eligible sampled children was 1,652,653. The final step was to adjust the weights of the respondents to account for nonresponse, where the nonresponse adjustment was the weighted number of sampled children divided by the weighted number of respondents.

Since many 9- and 10-year-old children are in fourth grade and beyond and not eligible for the study, the sum of the weights does not equal the sum of the control totals in tables 3-1 and 3-2, rather the sum of the weights for 9- and 10-year-old children is 1,652,653. Thus, the estimated total number of eligible children is 37,395,992 (35,743,339 + 1,652,653). The final raked person weight for each sampled child with a complete ECPP interview is contained in the variable EWEIGHT in the data file.

Table 3-1.--NHES:95 control totals for raking children age 0 to 8 in the ECPP survey

Control characteristics		Control totals
Race/ethnicity	**Household income**	
Non-Hispanic/non-black	Less than $10,000	2,690,522
Non-Hispanic/non-black	$10,000 or more	22,944,750
Hispanic	Less than $10,000	1,437,596
Hispanic	$10,000 or more	3,116,528
Black/non-Hispanic	Less than $10,000	2,344,426
Black/non-Hispanic	$10,000 or more	3,209,517

3.4 Computing Sampling Errors

Direct estimates of the sampling errors assuming a simple random sample of children will typically underestimate the variability in the estimates. The NHES:95 sample design and estimation include procedures such as oversampling areas with higher concentrations of minorities, clustering the sample of persons within households, sampling with differential probabilities, and raking to control totals, which deviate from the assumption of simple random sampling.

One method for computing sampling errors to reflect these aspects of the sample design and estimation is the replication method. Using replication involves splitting the entire sample into a set of groups or replicates based on the actual sample design of the survey. The survey estimates can then be estimated for each of the replicates by creating replicate weights that mimic the actual sample design and estimation procedures used in the full sample. The variation in the estimates computed from the replicate weights can then be used to estimate the sampling errors of the estimates from the full sample.

A total of 50 replicates were defined for the NHES:95 based on the sampling of telephone numbers. A total of 50 replicates were created to provide reliable estimates of sampling errors within reasonable data processing costs. The specific type of replication procedure used for the NHES:95 is a jackknife replication method (Wolter 1985) It involves dividing the sample into 50 random samples for the computation of the replicate weights. Replicate weights were created for each of the 50 replicates using the same estimation procedures used for the full sample. These replicate weights are included in the data file as ERPL1 to ERPL50. The computation of the sampling errors using these replicate weights can be done easily using WesVarPC, a Windows-based software program (Brick et al. 1995), with the JK1 option. The WesVarPC software is available free of charge through the Internet (http://www.westat.com) or by sending an e-mail message to wesvar@westat.com.

Another approach to the valid estimation of sampling errors for complex sample designs is to use a Taylor series approximation to compute sampling errors. The software available to compute sampling errors using this method typically requires that two variables, stratum and PSU, be available for all the completed interviews. One example of this type of software is SUDAAN (Shah et al. 1995). To support users with this type of software, the stratum and PSU variables were computed based on the sample design and have been included in the data file as STRATUM and PSU. For the NHES:95, there are two strata corresponding to the high and low minority concentration telephone number exchanges. The PSUs refer to the clusters of persons living together at telephone numbers, that is, there is a unique PSU value for each unique telephone number. The full sample weight to be used for analysis is EWEIGHT. To produce sampling errors for estimates from the NHES:95 data using SUDAAN, the appropriate statements include the DESIGN=WR and NEST STRATUM PSU statements.

Data users should be aware that the use of different approaches or software packages in the calculation of standard errors may result in somewhat different standard errors. Estimates of standard errors computed using the replication method and the Taylor series method are nearly always very similar, but not identical.

Approximate Sampling Errors

Although the methods of directly calculating the sampling errors using the methods described above are recommended for many applications, simple approximations of the sampling errors may be valuable for some purposes. One such approximation is discussed below.

Most statistical software packages compute standard errors of the estimates based upon simple random sampling assumptions. The standard error from this type of statistical software can be adjusted for the complexity of the sample design to approximate the standard error of the estimate under the actual sample design used in the survey. For example, the variance of an estimated proportion in a simple random sample is the estimated proportion (p) times its complement (l-p) divided by the sample size (n). The standard error is the square root of this quantity. This estimate can be adjusted to more closely approximate the standard error for the estimates from the NHES:95.

A simple approximation of the impact of the sample design on the estimates of the standard errors of the estimates that has proved useful in previous NHES surveys and in many other surveys is to adjust the simple random sample standard error estimate by the root design effect (DEFT). The DEFT is the ratio of the standard error of the estimate computed using the replication method discussed above to the standard error of the estimate under the assumptions of simple random sampling. An average DEFT is computed by estimating the DEFT for a number of estimates and then averaging. A standard error for an estimate can then be approximated by multiplying the simple random sample standard error estimate by the average DEFT.

In complex sample designs, like the NHES:95, the DEFT is typically greater than one due to the clustering of the sample and the differential weights attached to the observations. In the NHES:95, both of these factors contributed to making the average DEFT greater than one. A fuller description of these factors for the NHES:95 is given in Brick and Broene (forthcoming).

The average DEFT for the ECPP file was 1.2, where the average was computed over a range of estimated proportions with at least 50 estimates in each of the subgroups described below. The estimated DEFT computed for a particular estimate was typically between 0.8 and 1.4. The average DEFT did not vary considerably for subgroups defined by the size for the estimate, the path (infant/toddler, preschool, kindergarten, primary school, home school), or by race and ethnicity.

The average DEFT can be used to approximate the standard error for an estimate. For example, if a weighted estimate of 60 percent is obtained for some characteristic (for example, suppose that 60 percent of children participate in some type of child care arrangement), then an approximate standard error can be developed in a few steps. First, obtain the simple random sampling error for the estimate using the weighted estimate in the numerator and the unweighted sample size in the denomimator: the standard error for this 60 percent statistic would be the square root of ((60 x 40)/14,064) = 0.41, where the weighted estimate is 60 percent (p), 40 is 100 minus the estimated percent (100-p), and the unweighted sample size is 14,064 (n). The approximate standard error of the estimate from the NHES:95 is this quantity (the simple random sample standard error) multiplied by the DEFT of 1.2. In this example, the estimated standard error would be 0.49 percent (1.2 x 0.41).

The approximate standard error for a mean can be developed using a related procedure. First, the mean is estimated using the full sample weight in a standard statistical package like SAS or SPSS. Second, the simple random sample standard error is obtained through a similar, but unweighted, analysis. Third, the standard error from the unweighted analysis is multiplied by the DEFT of 1.2 to approximate the standard error of the estimate under the NHES:95 ECPP design. For example, suppose that the estimated (weighted) mean number of hours per week in nonparental care was 20 and the simple random sampling standard error (unweighted) was 5 hours. Then, the approximate standard error for the estimate would be 6 hours (5 x 1.2).

Users who wish to adjust the standard errors for parameter estimates of regression models should follow a procedure similar to that discussed for means, above. Specifically, the parameter estimates of the model can be estimated using a weighted analysis in a standard statistical software package such as SAS or SPSS. A similar, but unweighted, analysis will provide the simple random sample standard errors for these parameter estimates. The standard errors can then be multiplied by the DEFT to arrive at the adjusted standard error for the NHES:95 design. For example, if a given variable has a weighted estimate of 2.334 and an unweighted standard error of 0.45, then the adjusted standard error would be 1.2 x 0.45 = 0.54.

It should be noted that direct computation of the standard errors is always recommended when the statistical significance of statements would be affected by small differences in the estimated standard errors.

Variance estimation for the NHES:91 and NHES:95

Some users of the NHES:95 ECPP data may wish to make comparisons with data from the early childhood component of the NHES:91, the last NHES survey also addressing the topic of child care arrangements and early childhood programs. Please consult section 7.2.6, Variance estimation for the NHES:91 and NHES:95, for a discussion of the variance estimation procedures that can be used for each data set.

3.5 Imputation

In the NHES:95, as in most surveys, the responses to some data items are not obtained for all interviews. There are numerous reasons for item nonresponse. Some respondents do not know the answer for the item or do not wish to respond for other reasons. Some item nonresponse arises when an interview is interrupted and not continued later, leaving items at the end of the interview blank. Item nonresponse may also be encountered because responses provided by the respondent are not internally consistent, and this inconsistency is not discovered until after the interview is completed. In these cases, the items that were not internally consistent were set to missing.

For most of the data items collected in the NHES:95, the item response rate was very high with a median item response rate of 98.8 percent. (The item response rates are discussed in detail in chapter 4.) Despite the high item response rate, **all data items with missing data on the file were imputed**. The imputations were done for two reasons. First, complete responses were needed for the variables used in developing the sampling weights. Second, users will be computing estimates in a variety of methods and complete responses should aid their analysis. The procedures for imputing missing data are discussed below; more information is available in a Working Paper, *Unit and Item Response Rates, Weighting, and Imputation Procedures in the 1995 National Household Education Survey* (Brick and Broene forthcoming).

A hot-deck procedure was used to impute missing responses (Kalton and Kasprzyk 1986). In this approach, the entire file was sorted into cells defined by characteristics of the respondents. The variables used in the sorting were general descriptors of the interview and also included any variables involved in the skip pattern for the items. The standard set of sort order variables for items with an item response rate greater than 95 percent consisted of MAINRSLT, FAMSIZE, SEX, RACETH, and HINCMRNG. MAINRSLT (main result) is the final completion code for an extended interview and is a key variable for determining skip patterns for cases. FAMSIZE is a variable classifying respondents into 1) two-parent/guardian households or 2) otherwise. RACEETH is a variable classifying respondents as 1) Hispanic, 2) black, non-Hispanic, or 3) other. HINCMRNG is a variable identifying household income as 1) less than or equal to $25,000 or 2) greater than $25,000.

All of the observations were sorted into cells defined by the responses to the sort variables, and then divided into two classes within the cell depending on whether or not the item was missing. For an observation with a missing value, a value from a randomly selected donor (observation in the same cell but with the item completed) was imputed for the missing value. After the imputation was completed, edit programs were run to ensure the imputed responses did not violate edit rules.

For some items, the missing values were imputed manually rather than using the hot-deck procedure. This happened most often when the variable was collected only once for the household (rather than for each sampled child) or involved complex relationships. Manual imputation was also used if edit failures were found after the hot-deck imputations were completed. Manual imputation was done for very few cases, relative to the total number of cases in the ECPP data set. Manual imputation procedures to correct for edit failures were guided by the total distribution of values for the item being imputed and by the consistency of other data for the individual case. Please see the Working Paper entitled *Unit and Item Response Rates, Weighting, and Imputation Procedures in the 1995 National Household Education Survey* (Brick and Broene forthcoming) for more information about manual imputation for the NHES:95.

Additional measures were taken to impute some variables that had item response rates of less than 95 percent. Altogether, there were 111 variables with response rates of less than 95 percent and sample sizes greater than 25. Focusing on items administered to at least 25 cases eliminates other items for which the response rate is dependent on just a few cases. For 31 of the 111 variables, additional correlated variables could be identified and were added to the standard sort variables to improve the hot-deck imputation for these items. This included additional sort variables that were added in the hot-deck imputation of age-related variables (e.g., the age at which children first started attending a center-based program). These 31 items, and the additional sort variables in parentheses, are as follows (see appendix A for the questionnaire items with which these variable names are associated): PAGEYR (AGE94), RCAGEYR (current age), NCAGEYR (current age), HSAGEYR (current age), CPSAGEYR (current age), CPNAGEYR (current age), RCAGEMO (RCAGEYR), NCAGEMO (NCAGEYR), HSAGEMO (HSAGEYR), CPSAGEMO (CPSAGEYR), CPNAGEMO (CPNAGEYR), RCSTRTYR (RCAGEYR), NCSTRTYR (NCAGEYR), HSSTRTYR (HSAGEYR), CPSTRTYR (CPSAGEYR), HSGOVT (HEDUC[3]), HSKIDS (HEDUC[3]), HSHRSONL (HEDUC[3]), HSEDUC (HEDUC[3]), HSPARADV (HEDUC[3]), HSTEST (HEDUC[3]), HSDISABL (HEDUC[3]), HSSICK (HEDUC[3]), HSCOST (HEDUC[3]), HDMIX (HEDUC[3]), CHMIX (HEDUC[3]), CPCOST1-3 (CPUNIT1-3), MOMMTHS (MOMWORK), MOMEARN (MOMGRADE, MOMUNIT), DADENHRS (DADHOURS), and DADUSAGE (father's current age). These 31 variables had response rates ranging from 82 to 94 percent. For the remaining 80 variables with response rates less than 95 percent, only the standard sort variables were used.

For each data item for which any values were imputed, an imputation flag variable was created. If the response for the item was not imputed, the imputation flag was set equal to 0. If the response was imputed, the flag was set to either 1, 2, 3, or 4. The value of the imputation flag indicates the specific procedure used to impute the missing value. The imputation flag was typically set to 1 if the missing value was imputed using the standard hot-deck approach. Other imputation flag values are explained below.

The procedure for hot-deck imputation only recognizes missing value codes as those that need to be replaced by imputed values. For the NHES:95, these missing value codes were -7=refused, -8=don't know, and -9=not ascertained. Therefore, in some cases, variables that originally equaled -1 (inapplicable) had to be recoded to a missing value code (i.e., -9=not ascertained) prior to being imputed using the standard hot-deck approach. This was done so that data were consistent with the skip patterns of the questionnaire. For these cases the imputation flag was set to 2. For example, if the value of KPPUBL (B6) equaled -8 for a child, then KPCHOICE (B7) and KPRELGON (B8) were never asked and thus equaled -1 (inapplicable). During the imputation process for this child, if KPPUBL was imputed to equal 2 (private), then KPRELGON had to first be recoded from -1 (inapplicable) to -9 (not ascertained) before the imputation procedure would recognize KPRELGON as a variable that should be imputed to equal either 1 (church-related) or 2 (not church-related). In this case, the imputation flag for KPRELGON would be set to 2.

For some items with complex skip patterns and only a few missing values, the item was imputed manually and the flag was set to 3. The imputation flag was set to 4 if the reported value was "don't know" prior to imputation using the standard hot-deck approach. Code 4 was utilized for only a subset of variables for which a "don't know" response is analytically meaningful, specifically, items concerning parent knowledge of care provider or program characteristics (these variables are discussed further in section 4.3).

---

[3] HEDUC is a variable created for imputation purposes to indicate the highest education level of any household member.

The imputation flags were created to enable users to identify imputed values. Users can employ the imputation flag to delete the imputed values, use alternative imputation procedures, or account for the imputation in computation of the reliability of the estimates produced from the data set. For example, some users might wish to analyze the data with the missing values rather than the imputed values. If the flag corresponding to the variable is not equal to 0, the user can replace the imputed response with a missing value to accomplish this goal. This method could also be used to replace the imputed value with a value imputed by some user-defined imputation approach. Finally, if the user wishes to account for the fact that some of the data were imputed when computing sampling errors for the estimates, the missing values could be imputed using multiple imputation methods (Rubin 1987) or imputed so that variance procedures in Rao and Shao (1992) could be used.

4. DATA COLLECTION METHODS AND RESPONSE RATES

4.1 Data Collection Procedures

The following sections discuss the procedures used in the data collection phase of the NHES:95, including the use of computer-assisted telephone interviewing (CATI), staff training, interviewer assignments and contact procedures, and quality control. More detailed descriptions of these topics can be found in a Working Paper entitled *Design, Data Collection, Interview Timing, and Data Editing in the 1995 National Household Education Survey* (Collins et al. forthcoming).

4.1.1 CATI System Applications

The use of a CATI system for the NHES:95 included a number of applications that facilitated the implementation of the survey. Briefly, the most salient features of the CATI system for the NHES:95 were as follows:

- **Sampling:** The use of online sampling through CATI eliminated the need for separate screening and interviewing calls, reducing the cost and the burden on respondents.

- **Scheduling:** The CATI system was used to feed telephone numbers to the interviewers, maintain a schedule of callback appointments, and reschedule unsuccessful contact attempts to the appropriate day and time.

- **Skip Patterns:** The CATI system was programmed to automatically guide interviewers through the complex skip patterns in the questionnaire, reducing the potential for interviewer error and shortening the questionnaire administration time.

- **Copying Responses:** The CATI system was used to copy responses from one interview to another to prevent unnecessary repetition of questions. For example, when two children with the same parents were sampled in a household, the parent characteristics series and household information items were asked only once. This helped to reduce response burden.

- **Monitoring Survey Progress:** The CATI system was programmed to provide automatic status reports throughout data collection. This allowed ongoing monitoring of the survey's progress.

- **Online Help:** The CATI system was programmed to provide an online help screen for each screen in the Screener and extended interviews. These screens, which could be accessed with a keystroke by the interviewer, clarified terminology, explained the intent of questions, and helped the interviewer obtain correct information.

4.1.2 Interviewer Training

Interviewer training was conducted over a 3-week period in late December 1994 and early January 1995. Interviewers were trained in groups of about 30. Interviewers experienced in conducting random-digit-dial CATI surveys received 16 hours of training related to the conduct of the NHES:95, while interviewers with no such previous experience received 20 hours of NHES:95 project training. Prior to the NHES:95 project training, all interviewers had participated in a basic training in general interviewing techniques and the use of the CATI system. In total, 289 interviewers completed training for the study.

Interviewer training was conducted using the CATI system. The trainees entered information in the CATI system during training presentations, providing them with hands-on experience prior to beginning data collection. The topics covered in the training session included an introduction to the study, interactive lectures based on each of the survey questionnaires, details about survey procedures, and techniques for refusal avoidance. Prior to live interviewing, trainees practiced interviews in pairs using several role-play scripts. The majority of training time (about 11 to 12 hours) was spent on interactive lectures and practice interviews using role-play scripts. Most of the remaining time was spent on procedures for contacting households and respondents and techniques for refusal avoidance.

The survey staff included 16 interviewers bilingual in English and Spanish. These interviewers received the same English training as all other interviewers, and were then trained to conduct the interviews in Spanish. All of the CATI screens were translated into Spanish, and these screens were available to bilingual interviewers at a keystroke.

4.1.3 Interviewing Procedures

The CATI system scheduled cases automatically, based on an algorithm that was customized for the NHES:95 survey. The system assigned cases to interviewers in the following order of priority:

- Cases that had specific appointments;
- Cases that had unspecified appointment/general callback times for the time period;
- Cases that had resulted in busy signals 15 minutes earlier;
- Cases that had not been contacted on previous attempts and had not been attempted during the time frame; and
- Cases that were new and had never received call attempts.

At least seven attempts were made by NHES interviewers to screen households in order to determine the presence of eligible household members, that is, an eligible child or adult. These calls were staggered on different days of the week and at different times of the day over a period of at least 2 weeks. This included at least two daytime calls, three evening calls, and two weekend calls. In addition, nearly all cases for which this seven-call limit was reached were released at several points during data collection to receive additional calling attempts. Some cases received more than 20 calls in this effort to complete screening interviews. Cases that were coded as problems were referred to a telephone supervisor to discuss appropriate methods of completing an interview (e.g., holding a case for some time and releasing it for additional attempts later in the data collection period). In the paragraphs below, the specific calling strategies used during the NHES:95 data collection and their results are described. Because most nonresponse in a random digit dialing (RDD) survey occurs at the screening level, these procedures emphasized increasing the Screener response rate. Please see *Design, Data Collection, Interview Timing, and Data Editing in the 1995 National Household Education Survey* (Collins et al. forthcoming) for a more detailed account of these procedures and their results.

The NHES:95 was conducted primarily in English, but provisions were made to interview persons who spoke only Spanish. As mentioned above, the questionnaires were translated into Spanish, Spanish versions of the CATI instruments were programmed, and bilingual interviewers were trained to complete the interview in either English or Spanish.

When the person answering the telephone was not able to speak English, and the interviewer was not bilingual and was not able to identify an English-speaking household member, the interviewer coded the case as a "language problem" and further specified the case as either "hearing/speech problem," "Spanish," or "language other than English or Spanish." Bilingual interviewers were the only ones who could access these "language problem" cases for followup. If a bilingual interviewer encountered a Spanish-speaking respondent, the interviewer could immediately begin to conduct the interview in Spanish without ever coding the case as a language problem.

There were 359 Screeners that were classified by at least one interviewer as a "hearing/speech problem." About one-quarter of these cases (n=100) were eventually completed, either because another household member answered the phone or because the interviewer initially misclassified the case. Of the 100 hearing/speech problem Screeners that were completed, 9 were completed in Spanish.

A total of 1,633 Screeners were classified by the first interviewer making contact as Spanish-speaking. Eventually, 1,300 of these cases were completed, 95 percent of which were completed in Spanish. About 80 percent of all Spanish-classified, language-problem cases were finalized as completes, somewhat higher than the overall completion rate for the Screener.

For the Screeners with respondents identified by the first interviewer making contact as speaking some language other than English or Spanish, only about one-quarter were completed. There were 706 cases in this category; 138 were completed in English and 63 were completed in Spanish.

During the last two weeks of data collection, Screener cases that had been coded twice as non-English language problems (as opposed to hearing/speech problems) were released for additional call attempts in an effort to identify an adult household member who spoke either English or Spanish. The number of Screener cases released for this activity was 393 and only about 10 percent resulted in completed Screener interviews.

Refusal conversion efforts were used to obtain responses from households or individual respondents who had initially refused to complete an interview. However, if the interviewer indicated that the initial response was "hostile" (e.g., profane or abusive), the case was reviewed by a supervisor to determine whether another attempt should be made. One refusal conversion attempt was made for each

Screener or extended interview refusal, with the exception of these "hostile" cases. For most of the field period, a 14-day hold was placed on initial refusals before a conversion attempt was made. This period was decreased near the end of data collection to facilitate survey close-out while maximizing response rates.

An additional refusal conversion attempt was made in a subset of cases which had twice refused to participate in the Screener interview. The cases included in this effort were those for which neither the first nor second refusal received a code of "hostile." This effort resulted in the completion of 2,310 additional Screeners, which is about 5 percent of all completed Screeners. All refusals were considered to be final if a third contact with the household resulted in a code of refusal. For extended interviews, cases were coded as final refusals if the first conversion attempt resulted in a second refusal.

Another effort to increase the Screener response rate was the release of "maximum calls" cases, in which a person had answered on at least one of the seven previous attempts. The cases were held for a period of time and released for additional attempts periodically during the data collection period. Initially, only maximum call cases that had never been released for additional attempts were released. However, toward the end of the data collection period, all maximum call cases were released for additional call attempts, regardless of how many additional attempts they had already received. This effort resulted in the completion of 1,393 additional Screeners, which is about 3 percent of all completed Screeners.

There were some numbers at which no answer was ever received during the seven attempts, called "no answer" cases. These cases were also released for additional call attempts, resulting in nearly all no answer cases receiving 14 or more calls unless they were completed prior to that number of attempts. Telephone company business office checks indicated that approximately 40 percent of cases finalized as no answer cases were residential [see *Unit and Item Response Rates, Weighting, and Imputation Procedures in the 1995 National Household Education Survey* (Brick and Broene forthcoming) for details regarding the use of telephone company business office checks to estimate the residential status of telephone numbers]. Based on this information, the final noncontact cases were proportionally allocated to residential and nonresidential status in the calculation of final response rates.

Another activity to increase Screener-level response included a nonrespondent mailing for those telephone numbers for which an address could be obtained. A brief letter explaining the purpose of the NHES:95 and encouraging participation in the study was mailed to approximately 12,000 households which had not yet completed screening interviews. About one-third of the households to which a letter was mailed completed screening interviews. This yield was higher than that for households for which addresses were sought but could not be obtained (17 percent).

4.1.4 Data Collection Quality Control

Data collection quality control efforts began during the CATI development period. As the CATI system was programmed, extensive testing of the system was conducted. This testing included review by project research staff, telephone interviewing staff, data preparation staff, statistical staff, and the programmers themselves. The testing by staff members representing different aspects of the project was designed to ensure that the system was working properly from all of these perspectives. Three live pretests were conducted in households between March 31 and April 6, June 10 and 13, and July 8 and 9 of 1994. During the first phases of the pretest, 759 ECPP and 120 AE extended interviews were completed. The purpose of the field test was to ensure that the CATI system was working properly. Modifications to the instruments to address some administrative problems were also made at this time. During the second pretest 111 ECPP and 99 AE extended interviews were completed. The purpose of this phase was to evaluate revisions to the instruments made after the first phase. A few final revisions to the AE interview were evaluated during the third pretest in which 54 extended interviews were completed.

Quality control activities continued during training and data collection. During interviewer training, interviewers were paired with one another and they conducted role-play interviews on telephones monitored by supervisors. When interviewers began actual data collection, they were monitored on an ongoing basis by telephone center supervisors. Project research staff also monitored the interviewers occasionally. Data preparation staff reviewed the cases from the CATI system as they were completed and referred problems to the project staff for resolution. Interviewer memos were posted and distributed when any recurring problems were identified. Additional training was provided as necessary.

Throughout data collection, supervisors and telephone monitors (experienced telephone interviewers who were trained for monitoring) monitored the interviews by listening for about 15 minutes at a time to the interviewers from either a monitoring room or from a carrel on the floor of the telephone center. The monitor completed a special monitoring form that covered five major areas of telephone interviewing:

- Reading and general skills;
- Listening skills and probing;
- Recording;
- Handling refusals and questions; and
- Telephone manner and relationship with respondent.

The monitors recorded their impressions of the interviewer's skills and abilities for 22 items within these five major areas using three categories: "no problem," "minor difficulty," and "major difficulty." If a skill was not rated during the monitoring session, a not applicable (N/A) code was used. Interviewers who had major difficulties were counseled and monitored to make sure the difficulties were resolved. If the problems continued, then the interviewers were released from the NHES:95 interviewing pool.

In addition, at least once a week the CATI management system produced computer-generated reports that displayed response rates, refusal rates, and refusal conversion rates for each NHES:95 interviewer. These reports assisted telephone center supervisors in identifying interviewer performance problems that might not be detected through monitoring. For instance, these reports would allow supervisors to identify interviewers with low response rates, even though monitoring sessions may not have indicated that the interviewer had problems obtaining respondent cooperation.

4.2 Response Rates

A response rate is the ratio of the number of units with completed interviews (the units could be telephone numbers, households, or persons) to the number of units sampled and eligible to complete the interview. In some cases, these rates are easily defined and implemented, while in other cases the numerators or denominators of the ratio must be estimated.

The "response rate" is the percentage of possible interviews completed, taking all survey stages into account, and the "completion rate" is used to measure the ability to complete interviews for a specific component of the survey. For example, household members are identified for extended interview in a two-stage process: first, Screener interviews are conducted to enumerate and sample household members, and then interviews are conducted for the sampled members using extended questionnaires. The failure to complete the first stage Screener means that it is not possible to enumerate and interview any members of the household. The completion rate for the second stage is the percentage of sampled persons with completed interviews. The response rate is the product of the first- and second-stage completion rates.

Response rates and completion rates are identical for the first stage of the sampling and interviewing. For the NHES:95, the first stage is the Screener. The next section discusses the response rate (which is also the completion rate) for the Screener and provides a profile of the characteristics of the respondents. The response and completion rates for the extended interviews are given in the following sections.

All of the response rates reported are weighted to account for different probabilities of selection. The weighting gives a more accurate representation of the proportion of the population that responded than unweighted response rates, although in most cases the rates are similar. Additional information on the NHES:95 response rates, including the findings of additional nonresponse bias analyses, is included in *Unit and Item Response Rates, Weighting, and Imputation Procedures in the 1995 National Household Education Survey* (Brick and Broene forthcoming).

4.2.1 Screener Response Rates

The first panel of table 4-1 gives the disposition of the 120,459 telephone numbers that were sampled for the NHES:95. This includes 105,799 numbers in the Basic Screener sample, 4,040 numbers in the Expanded Screener sample, and 10,620 in the Adult Education Splice sample. The three major categories of response status are 1) those identified as numbers for residential households, 2) those identified as nonresidential numbers (primarily nonworking and business telephone numbers), and 3) those numbers that, despite numerous attempts, could not be identified as residential or nonresidential.

In the lower part of the table, the estimated response rate of 73.3 (business office method) for the Screener is shown. The numerator is the number of telephone numbers in households that participated in the survey (45,465) weighted by the probability of selecting the telephone number. The denominator is the total number of residential telephone numbers plus the 40.5 percent of numbers with unknown residential status that are assumed to be residential also weighted by the probability of selecting the telephone number. The 40.5 percent estimate was based on a special study conducted at the conclusion of the NHES:95 survey in which telephone business offices were contacted to provide the status of a sample of telephone numbers that had unresolved residency status. More details can be found

Table 4-1.-- Number of telephone numbers dialed, by residential status and weighted Screener response rates

Screener response category	Number	Percent of all numbers	Percent of residential numbers
Total	120,459	100.0	
Identified as residential	59,713	49.6	100.0
Participating	45,465	37.7	76.1
Not participating	14,248	11.8	23.9
Identified as nonresidential	54,131	44.9	
Unknown residential status	6,615	5.5	

Screener response rates*	Rate (Percent)
Estimated response rate (using business office method)	73.3
CASRO response rate	72.4
Conservative response rate	69.0
Liberal response rate	76.6

*All the response rates use the estimated number of participating households as the numerator. The denominators vary but are all estimated totals: for the estimated response rate using the business office method, the proportion of unknown residential status numbers included in the denominator was based upon the proportion identified in checks with telephone business offices; for the CASRO (Council of American Survey Research Organizations) responses rate, the proportion of unknown residential status numbers included in the denominator was based upon the residency rate for the numbers with known residential status; for the conservative response rate, all of the unknown residential status numbers were included; for the liberal response rate, none of the unknown residential status numbers were included.

NOTE: Because of rounding, details may not add to totals.

SOURCE: U.S. Department of Education, National Center for Education Statistics, National Household Education Survey (NHES), spring 1995.

in *Unit and Item Response Rates, Weighting, and Imputation Procedures in the 1995 National Household Education Survey* (Brick and Broene forthcoming). If the raw count of telephone numbers was not weighted, the Screener response rate using the business office method would also have been 73 percent.

Other estimates of the response rates were developed, based on different means of allocating the telephone numbers with unknown residential status. The footnote to table 4-1 explains four different schemes for estimating the response rate. It is reasonable to say that the Screener response rate is between 69 and 77 percent, and the best estimate is 73 percent. The variability in the estimates arises because it is not possible to identify precisely the residency status for each telephone number.

As shown in table 4-2, the Screener response rate varied somewhat by region of the country (based on Census region). The Screener response rates in the Northeast and West regions are about 5 percent lower than those in the Midwest and South. A few other characteristics are shown in the table based upon the characteristics of the area served by the telephone number. The response rates were about 3 percent lower in the high minority concentration areas than in other areas. The response rates are also lower in the areas with the highest concentration of renters. These findings suggest a general pattern of response rates being somewhat lower in areas with lower economic statuses. However, the Screener response rates were also lower in areas with relatively large percentages of college graduates than in other areas.

Table 4-2.-- Number of telephone numbers dialed in the Screener, by response status and weighted response rates

	Total	Participating	Not participating	Nonresidential	Unknown residential status	Estimated response[1] rate (%)
Total	120,459	45,465	14,248	54,131	6,615	73.3
Census region						
Northeast	23,154	8,518	3,252	9,696	1,688	69.2
Midwest	25,261	9,683	2,592	11,756	1,230	76.5
South	44,760	17,616	4,850	20,232	2,062	75.8
West	27,284	9,648	3,554	12,447	1,635	70.0
Minority concentration						
High minority	62,984	22,631	7,614	29,284	3,455	71.5
Not high minority	57,475	22,834	6,634	24,847	3,160	74.3
Percent college graduates						
Less than 11 percent	37,045	14,018	3,770	17,586	1,671	76.5
11 to 25 percent	58,368	22,629	7,388	25,235	3,116	72.9
26 percent or more	25,046	8,818	3,090	11,310	1,828	70.1
Percent renters						
Less than 34 percent	54,890	22,539	6,251	23,355	2,745	75.4
34 to 50 percent	39,774	15,340	4,996	17,404	2,034	72.7
51 percent or more	25,795	7,586	3,001	13,372	1,836	66.7

[1] The estimated response rate is the number of completed interviews divided by the sum of the number of completed interviews, nonresponses, and 40 percent of the not resolved telephone numbers, weighted by the probability of selection.

SOURCE: U.S. Department of Education, National Center for Education Statistics, National Household Education Survey (NHES), spring 1995.

4.2.2 Extended Interview Response Rates

The number of children enumerated and sampled, and those with completed parent interviews for the ECPP component of the NHES:95, are given in table 4-3. Approximately 1 percent of all the children identified and sampled for the ECPP in the Screener were determined to be ineligible when the extended interview was conducted. Nearly all of these children were ineligible because they were enrolled in fourth grade or higher. ECPP interviews were not conducted for ineligible children.

Interviews were completed for 14,064 eligible children for a completion rate of 90 percent. The main reason an interview was not completed was because the parent/guardian refused to respond to the interview (71 percent of the nonresponse). The other major reason for nonresponse was inability to contact and interview the appropriate parent/guardian of the child (22 percent of the nonresponse).

When the completion rate for the extended interview is multiplied by the Screener completion rate, the overall response rate for the ECPP interview is obtained. The overall response rate was 66 percent (66.3 percent = 90.4 percent times 73.3 percent).

The completion rates for the ECPP extended interview are shown in table 4-3 by Census region, sex of the child, age of the child, and grade of the child. The sex, age, and grade of the child are the data reported in the Screener. The variation in the completion rates by Census region, age, and grade is not very large. The only exceptions are for the categories age 10 and "other" grade that do not contain many cases.

Table 4-3.-- Number of sampled Early Childhood Program Participation interviews, by response status and weighted completion rates

Respondent characteristic	Total	Complete	Nonresponse	Ineligible	Estimated completion rate (%)
Total	15,781	14,064	1,509	208	90.4
Census region					
Northeast	2,892	2,569	286	37	90.2
Midwest	3,406	3,063	302	41	91.1
South	5,731	5,131	523	77	90.7
West	3,752	3,301	398	53	89.4
Sex of child (Screener)					
Female	7,591	6,775	741	75	90.4
Male	8,113	7,240	763	110	90.6
Unknown[1]	77	49	5	23	90.3
Age of child (Screener)					
0	1,244	1,023	99	122	91.0
1	1,382	1,243	136	3	90.5
2	1,715	1,560	146	9	91.5
3	1,675	1,508	165	2	90.6
4	1,785	1,614	166	5	90.9
5	1,778	1,592	182	4	89.9
6	1,775	1,585	185	5	89.5
7	1,684	1,512	170	2	90.7
8	1,709	1,538	160	11	90.6
9	847	760	81	6	90.2
10	92	68	13	11	81.6
Unknown[1]	95	61	6	28	90.9
Grade of child (Screener)					
Not enrolled	6,690	5,919	599	172	91.0
Nursery/Preschool	2,023	1,818	203	2	90.1
Kindergarten	1,835	1,647	186	2	90.0
1st grade	1,728	1,536	189	3	89.4
2nd grade	1,664	1,492	168	4	90.4
3rd grade	1,805	1,622	160	23	90.8
Other[2]	36	30	4	2	88.1

[1] Status at the time of sampling.

[2] Other includes special education and ungraded.

NOTE: The response rate is the product of the completion rate given in this table and the Screener completion rate of 73.3 percent. The overall response rate is 66.3 percent (90.4 times 73.3 percent).

SOURCE: U.S. Department of Education, National Center for Education Statistics, National Household Education Survey (NHES), spring 1995.

4.3 Item Response in the ECPP Interview

For nearly all of the items in the ECPP interview, item response rates were very high. Nonresponse included "don't know," "refused," and "not ascertained." Most of the items in the interview had response rates of 95 percent or more. The median response rate for items with any missing values was 98.8 percent. There were 111 items with response rates of less than 95 percent and sample sizes greater than 25, only 42 of which had item response rates of less than 90 percent. Using a sample size of 25 eliminates those items that were dependent on just a few cases. Only one item with a sample size greater than 25, HINCMEXT (household income to the nearest thousand), had a response rate of under 75 percent (it was 60 percent). Table 4-4 shows the item response rates for a representative group of items. The items included were selected to represent key items, to represent the range of item response rates, and to examine any differences in response rates to items appearing early in the interview versus those appearing later. The number of cases for which each item was attempted and the percentage of cases for which a valid response was obtained are shown.

When an interview was broken off after a major portion of the questions were answered and it was not possible to recontact the respondent to complete the remaining questions, the case was included in the data set. In the ECPP interview, this occurred if the interview was completed through the health and disability questions, that is, all questions except those pertaining to parent and household characteristics were completed. This was the situation for 50 ECPP interviews. The item response rates do not decrease appreciably in the parent and household sections.

For more details on item response rates, including a complete listing of all item response rates, see *Unit and Item Response Rates, Weighting, and Imputation Procedures in the 1995 National Household Education Survey* (Brick and Broene forthcoming).

As discussed in chapter 3, all items with missing data were fully imputed. However, analysts may find that a "don't know" response category is analytically useful for some items in the ECPP interview, specifically, for items pertaining to parent knowledge of care provider or program characteristics. To support this analytic objective, special imputation flags were created to designate "don't know" responses that were imputed for a subset of items, listed below. For these items, an imputation flag value equal to 4 indicates that the original response was "don't know."

Table 4-4.--Item response rates for selected items in the Early Childhood Program Participation interview

Item	Number attempted	Percent response
Participation in relative care arrangements[1]		
Location of relative care	2,967	99.9
Hours per week of relative care	2,843	97.6
Receipt of education/training by relative care provider	2,687	93.6
Cost of relative care arrangement	782	85.2
Participation in nonrelative care arrangements[1]		
Location of nonrelative care	2,119	99.9
Hours per week of nonrelative care	2,068	99.0
Receipt of education/training by nonrelative care provider	2,099	83.3
Cost of nonrelative care arrangement	1,890	89.2
Participation in Head Start programs		
Location of Head Start program	326	98.5
Hours per week child attends Head Start	320	98.8
Receipt of education/training by Head Start teacher	326	82.2
Cost of Head Start program	76	93.4
Participation in center-based programs[1]		
Location of center-based program	3,094	99.7
Hours per week child attends center-based program	3,047	99.1
Receipt of education/training by center-based program teacher	3,068	82.9
Cost of center-based program	2,626	94.6
Home activities		
Number of times parent read to child in the past week	14,064	99.9
Did parent tell child a story in past week	9,929	99.1
Did parent visit a library with child in past month	9,929	99.9
Health and disability		
Child's general health status	14,064	99.9
Do child's disabilities affect his/her ability to learn	1,476	97.2
Parent and household items		
Mother worked for pay last week	13,760	99.6
Highest grade mother completed	13,760	99.1
Father worked for pay last week	10,788	99.5
Highest grade father completed	10,788	98.1
Household income	14,064	85.9
Household income to the nearest thousand	1,016	59.9

[1] These refer to the first reported relative, nonrelative, or center-based arrangement.

NOTE: The percent response rate is given as 99.9 when the number of missing values is less than 0.1 percent, rather than rounding the percent responses to 100 percent. This designation is used to distinguish such variables (which usually have fewer than 10 missing values) from those that have no missing values.

5. DATA PREPARATION

5.1 Coding and Editing Specifications

Most of the NHES:95 interview data were coded by the interviewers during the interview using the CATI system. As the interviewers entered the number of the response option given by the respondent, this number was written to the data file. Range and logic edits were developed for relevant items to maximize coding accuracy.

5.1.1 Range Specifications

The ranges of most of the items were determined by the codes available for the responses, since most were closed ended. For open-ended items that required an entry by the interviewer (for example, ages, dates, and the number of hours each week the child attends a center-based program) there were not specific sets of responses; therefore, reasonable ranges were defined.

Range checks included both hard- and soft-range edits. A "soft range" is one that represents the reasonable expected range of values but does not include all possible values. Responses outside the soft range were confirmed with the respondent and had to be entered a second time. For example, the age at which a child first attended any Head Start program had a soft range of 3 to 5. A value outside this range could be entered and confirmed as correct by the interviewer as long as it was within the "hard range" of values (2 to current age, maximum of 6). "Hard ranges" are those that have a finite set of parameters for the values that can be entered into the CATI system. Out-of-hard-range values for either open- or closed-ended questions were not accepted. If the respondent insisted that a response outside the hard range was correct, the interviewer could enter the information in a comments data file. These comments were reviewed by data preparation and project staff. Out-of-hard-range values were accepted if the comments supported the response. For example, one mother insisted that she attended school for 56 hours per week (MOMENHRS). The edits programmed into the CATI system considered this response to be an out-of-hard-range value that could not be entered directly (50 hours was the upper limit); instead it was entered into the comments data file. This response was judged by data preparation and project staff to be reasonable, and thus was later entered into the ECPP database.

After data collection was completed, range edits were rerun against the entire database to ensure that no outliers were inadvertently introduced during the post-data-collection updating process. Therefore, any outliers that exist in the ECPP data file were reviewed during the data preparation process and most of them originated from information entered into the comments data file.

5.1.2 Consistency Checks (Logic Edits)

Consistency or logic checks examine the relationships between responses to ensure that they do not conflict with one another or that the response to one item does not make the response to another unlikely. Logic specifications for the NHES:95 interviews were contained within the CATI system. For example, the CATI system was programmed to control skip patterns so that inappropriate items were not asked. Additional consistency (logic) checks for the NHES:95 interviews were also included. For example, a child could not be reported as repeating a grade higher than the one in which he or she was enrolled. If the logic check was violated, a special screen appeared that explained the discrepancy and allowed the interviewer to enter a correction. If the interviewer passed through the check screen once and information was still inconsistent, the interviewer was asked to reverify the information. After the second attempt, the inconsistent information was accepted. At several points during data collection, logic edits were also checked against the entire data base. Cases violating the edits were examined and either the information violating the edit was kept or it was coded "not ascertained" and later replaced with imputed data. Data were kept in circumstances where the data were judged to be plausible even though it violated the edit (e.g., a 5-year-old enrolled in second grade). In such circumstances, there was usually supporting information available in the comments data file.

5.1.3 Structural Edits

Because of the survey's complexity, the CATI database was a highly complex, hierarchical file. The relationships of database records were often dependent on values of variables contained in other database records; therefore, structural edit specifications were developed to check the structural integrity of the database. This ensured that all variables that should exist did exist, and those that should not exist did not exist in the database. For example, if there is a completed ECPP interview for a kindergartner, the data record that contains the kindergarten experience items must exist in the database. Structural edits were run against the entire database during data preparation.

5.1.4 Frequency and Cross-Tabulation Review

The frequencies of responses to all data items (both individual and in conjunction with related data items) were reviewed to ensure that appropriate skip patterns were followed. Members of the data preparation team checked each item to make sure the correct number of responses was represented for all items. If a discrepancy was discovered, the problem case was identified and reviewed. If necessary, the audit trail for the interview, which provided a keystroke-by-keystroke record of the interview, was retrieved to determine the appropriate response. If the audit trail revealed no additional information, either a data retrieval effort was made or the item was coded as "not ascertained" and later imputed.

5.1.5 Frequency Review of "Other, specify" Items

The "other, specify" open-ended text responses were reviewed to determine if they should be coded into one of the existing precoded categories. When a respondent selected an "other" response, the interviewer entered text into a "specify" field that appeared on the screen. The "specify" responses were reviewed by the data preparation staff and, where appropriate, coded into one of the existing response categories. New response categories were developed for some of the "other, specify" responses, if the number of responses warranted. This was the case for items MOMCARE (N20) and MOMCARWH (N22); this is indicated in the questionnaire in appendix A with italicized text.

After reviewing all "other, specify" response entries for recoding or creating new response categories, the proportion of remaining responses coded "other" was reviewed. It was considered desirable for each item to have no more than 10 percent of its responses coded as "other." However, this was not possible for a small number of items, specifically, HDINFSRC (receipt of another type of service for disabilities by children age 0-2), DADOTHER (another method of looking for work by fathers), and DADACTY (main activity last week of fathers not working for pay or not actively looking for work).

6. GUIDE TO THE DATA FILE AND CODEBOOK

6.1 Content and Organization of the Data File

This section describes the content of the public release data file constructed for the NHES:95 ECPP component. This file contains data from all completed ECPP interviews. There are four records for each ECPP interview completed, so the file contains 56,256 records for the 14,064 completed interviews. The file is organized so that logically related sets of variables are grouped together. The data items are listed in the file in the following order: system variables, household membership information, questionnaire item variables, derived variables, weighting and variance estimation variables, and imputation flag variables, and other flag variables.

A list of all the variables contained in the data file is shown in appendix B. The VARIABLE NAME column displays the unique identifier in the data file. The VARIABLE LABEL column displays a short label associated with the variable. The FORMAT column indicates if a variable has a numeric ("N") or a character format ("A"). Most of the variables in the ECPP file have numeric formats (Section 6.1.9 below specifies which variables have character formats). The RECORD NUMBER column indicates whether the variable is located in the first, second, third, or fourth record (also see section 6.1.8 that describes the RECNUM variable). The LENGTH column indicates the length of the variable by the number of digits. The length descriptor also includes the number of digits found after the decimal point for noninteger numeric variables (e.g., weight variables). The position of the variable is indicated in the START and END columns and indicates the position on the data record where the variable begins and ends.

The NHES:95 data files are provided on CD-ROM and are accessible through an Electronic Codebook (ECB) that allows data users to view variable frequencies, tag variables for extraction, and create the SAS, SPSS for DOS, or SPSS for Windows code needed to create an extract file for analysis purposes. The ECB contains both NHES:95 data sets, the Early Childhood Program Participation (ECPP) file and the Adult Education (AE) file, as well as data sets from the NHES:91 and NHES:93. Instructions for using the CD-ROM and ECB are provided in a separate document, *National Household Education Survey: NHES:91/93/95 Electronic CodeBook (ECB) User's Guide* (Collins and Chandler 1996). The sections that follow describe the contents of the ECPP data file.

6.1.1 System Variables

System variables are created during the conduct of an interview and are instrumental in the successful administration of the interview. Their creation is transparent to the interviewer and to the respondent. System variables fall into two categories: linking variables (record identifiers, or IDs) and interview status variables. Linking variables are record identifiers that provide a link to other interviews completed in the same household. Status variables are set at the completion of each interview to define completion status.

ENUMID is the 10-digit identifier variable for the subject of the interview. It is composed of the eight-digit household identifier and the two-digit household member number of the subject of the interview. For example, for a household (ID=12345678) composed of MOM (person 01), DAD (person 02), sampled CHILD1 (person 03), and sampled CHILD2 (person 04), there will be interview records on the ECPP file with ENUMID = 1234567803 and one other interview record in the file with ENUMID = 1234567804. The first eight digits of the ENUMID provide the link between household members. Thus, ENUMID can be used to identify ECPP interviews from the same household, but it can also be used with BASMID in the Adult Education (AE) data file to identify AE and ECPP interviews from the same household (by comparing the first eight digits of BASMID in the AE data file to the first eight digits of ENUMID in the ECPP data file).

MAINRSLT (main result) is the variable that holds the final completion code for the interview.

The values for MAINRSLT are:

CI = Complete ECPP interview about an infant/toddler
CN = Complete ECPP interview about a preschooler
CK = Complete ECPP interview about a kindergartner
CS = Complete ECPP interview about a primary school student
CH = Complete ECPP interview about a home schooled child

ENGLSPAN is the variable that indicates whether the interview was conducted in English or in Spanish.

The values for ENGLSPAN are:

1 = Interview was conducted in English
2 = Interview was conducted in Spanish

6.1.2 Household Membership Variables

Information about the relationships of other household members to sampled children was collected in both the Screener and the ECPP interview. All household members were enumerated in the Screener interview. Data collected included the age and sex of each household member, the most knowledgeable respondent for the ECPP interview about the child, and the relationship of the ECPP respondent to the child. If the respondent relationship was recorded as mother or father, an additional question was asked to gather the specific parent relationship (birth, adoptive, step, or foster).

In the ECPP interview, the relationships of all other household members were collected. Similar to the Screener, if the relationship was recorded as mother or father, an additional question asked to gather the specific parent relationship. The information collected in this sequence of questions was used in conjunction with the respondent relationship collected in the Screener to determine if the child had a mother figure (birth, adoptive, step, or foster mother) or father figure (birth, adoptive, step, or foster father) living in the household.

The gender data collected during the household enumeration in the Screener interview were used to drive the gender-based wording of subsequent questions throughout the ECPP interview. The age of each subject child was verified in the ECPP interview by collecting each child's month and year of birth.

The household membership information is stored on the public release data file in the following order: information about the subject of the ECPP interview (the sampled child), information about the ECPP respondent (the most knowledgeable parent/guardian), mother information, father information, and information on all other household members (other than the subject, the mother, and the father). Please note that the ECPP respondent information (i.e., ERESPAGE, ERESPSEX, ERESRELN, EPARTYPE) is repeated in one of two places. If the ECPP respondent is the mother or the father, some of the respondent information (i.e., ERESPAGE, EPARTYPE) will be repeated in the mother or father variables (i.e., MOMAGE, MOMTYPE, DADAGE, DADTYPE). If the ECPP respondent is someone other than the mother or the father, that information will be contained in both the ECPP respondent variables and the other household member variables (i.e., AGE(n), RELATN(n)). The variables appear on the data file as follows:

AGE94 is the subject's age as of December 31, 1994.

SEX is the subject child's sex.

ERESPAGE is the ECPP respondent's age.

ERESPSEX is the ECPP respondent's sex.

ERESRELN is the ECPP respondent's relationship to the subject child.

EPARTYPE is the ECPP respondent's specific parental relationship to the subject child, if the respondent is a parent.

MOMAGE is the mother's age.

MOMTYPE is the type of mother (birth, adoptive, step, or foster).

DADAGE is the father's age.

DADTYPE is the type of father (birth, adoptive, step, or foster).

AGE1 is the age of the first enumerated household member other than the subject child and parents.

SEX1 is the sex of the first enumerated household member other than the subject child and parents.

RELATN1 is the relationship of the first enumerated household member to the subject child.

AGE, **SEX**, and **RELATN** variables are then repeated for each other household member using sequential numbers, e.g., AGE2, SEX2, RELATN2, and so on up to a maximum of thirteen other household members.

6.1.3 Questionnaire Item Variables

The questionnaire item variables appear on the file in the same order as they were asked. Refer to the questionnaires in appendix A for the order. The items on enrollment and grade in school appear in the Basic and Expanded Screener questionnaires and the ECPP questionnaire. In about 84 percent of ECPP interviews, the Screener respondent and ECPP interview respondent were the same person; in these cases, the items were asked only once in the Screener. However, if the Screener and ECPP respondents were different people, the ECPP interview responses were retained, since they are responses given by the person most knowledgeable about the child.

Some variables were excluded from the file for confidentiality reasons. These include the names of household members, verbatim string responses that might identify persons or places, and the individual ZIP Codes (HZIPCODE). Some of these variables are included in a separate restricted-use data file (see section 6.3 below). The Basic Screener, Expanded Screener, and ECPP questionnaires appear in appendix A; variable names are provided to the left of each question. Where an asterisk (*) appears to the left of a question in the ECPP questionnaire, it indicates that the variable is not available on either the public release or the restricted-use files. These are variables that were used for survey administration purposes only, such as the item verifying children's reported birth date (A2) or the item at the end of the relative care section of the questionnaire (D29) asking whether there are any other regular relative arrangements to report before ending that section of the interview.

"Code all that apply" questions allowed the respondent to select more than one of the answer categories given. As the responses were given, the interviewer coded the number appearing on the screen that corresponded to each response given. The numbered responses were recoded into one variable for each response category as "yes/no" codes. If the respondent gave the particular response, the associated variable was coded "yes." Otherwise, the associated variable was coded "no." An example of this type of question is E21, "How did you learn about this person as a care provider for [CHILD]?"

The code -1 indicates a legitimate skip, that is, that the item was not applicable to the child. For example, if the child attended a public kindergarten (KPPUBL (B6) = 1), the question about whether a private kindergarten was church-related (KPRELGON (B8)) would equal -1, since the child did not attend a private school.

There are repeating segments of questions in the Relative Care, Nonrelative Care, and Center-based Programs sections. Variable names and labels reflect sequences of the segments in each section. For example, RCPLACE2 is the location of the second relative care arrangement reported and CPCOST3 is the cost to the household of the third center-based program reported.

If the value for a variable is found in the questionnaire, but is not found in the frequency distribution, no respondent selected that response. This happened most frequently for variables in higher-ordered repeating segments of questions (e.g., variables pertaining to the third or fourth relative arrangement reported). Examples of variables that do not contain responses for all values presented on the questionnaire are RCEMPL2, NCUNIT4, and CPPLACE3.

6.1.4 Derived Variables

Derived variables were developed and included in the public use data file to aid users in their analyses. The derived variables fall into three categories: questionnaire item variables, counter variables, and variables linked to other data sources. Questionnaire item-derived variables were created by combining two or more items from the questionnaire. Counter-derived variables were created by counting the number of persons enumerated in the household. Linked-derived variables were created by using the respondent's ZIP Code or telephone number to extract data from other data sources, most notably the 1990 Census of Population Summary Tape File 3B (STF3B).

The derived variables appear together on the file in their own section in alphabetical order after the questionnaire variables. They are listed below in the same order with an explanation of how they were derived. The actual SAS code to create many of these variables appears in appendix C[4]. All of the variables that begin with the prefix ZIP were taken from the 1990 Census of Population Summary Tape File 3B (STF3B). All unique NHES:95 ZIP Codes were matched to ZIP Codes on the STF3B to extract urbanicity, percent black or Hispanic, and percent of persons under age 18 living in poverty.

AGEENTER is the age in months at which kindergartners and primary schoolers first entered elementary school. Note that current homeschoolers (MAINRSLT = CH), in addition to infant/toddlers and preschoolers (MAINRSLT = CI or CN), are not included in this variable (i.e., they are coded -1). For those who attended kindergarten (including transitional kindergarten), this equals the age at kindergarten entry; for those who did not attend kindergarten, this equals the age at pre-first or first grade entry. This variable was derived using KPAGEYR, KPAGEMO (B3) and PAGEYR, PAGEMO (C1).

ALLGRADE indicates the enrollment status, the grade level of children in graded schools, and the grade level equivalent for children in ungraded schools, special education programs, or home school. It was created using GRADE (A11) and GRADEEQ (A12). Because parents of children in the infant/toddler path (MAINRSLT=CI) were not asked about the children's enrollment status, infants/toddlers are coded -1 on this variable.

The values for ALLGRADE are:

0 = Not enrolled
N = Nursery/preschool/prekindergarten/Head Start
T = Transitional kindergarten
K = Kindergarten
P = Prefirst
1 = First grade or equivalent
2 = Second grade or equivalent
3 = Third grade or equivalent
U = Ungraded/no equivalent
-1 = Infant/toddler path

---

[4] There is no SAS code provided for counter-derived variables, for HHDAD and HHMOM which were created in the CATI system during interviews, or for linked-derived variables which include CENREG and the ZIP Code variables.

ANYCARE indicates whether the child currently participates in any nonparental care or program arrangements. It was derived using RCNOW (D1), NCNOW (E1), HSNOW (F1), CPNNOW (G1), and CPSNOW (G5).

The values for ANYCARE are:

1 = currently participates in any care or program arrangement
2 = does not currently participate in any care or program arrangement

CAREHOUR is the total number of hours per week spent in nonparental care arrangements or programs. For arrangements that take place less often than every week but at least once each month, CAREHOUR reflects the *average* number of hours each week (i.e., the number of hours each month divided by four). Children whose only arrangements take place less often than once each month are coded 0 hours on this variable, as are children in no care or program arrangements. This variable was derived using RCHRS1-RCHRS4 (D14), NCHRS1-NCHRS4 (E13), HSHRS (F13), and CPHRS1-CPHRS3 (G22) for weekly arrangements and using RCHRSWK1-RCHRSWK4 (D17), RCWKSMO1-RCWKSMO4 (D15), NCHRSWK1-NCHRSWK4 (E16), NCWKSMO1-NCWKSMO4 (E14), HSHRSWK (F16), HSWKSMO (F14), CPHRSWK1-CPHRSWK3 (G25), CPWKSMO1-CPWKSMO3 (G23) for monthly arrangements.

CENREG is a linked-derived variable that identifies the Census region in which the subject child lives. This variable was created by linking states and telephone area codes of the sampled numbers. Once the link between states and numbers was established, the Census regions were assigned as given below.

The following states and the District of Columbia are in each Census region:

Northeast: CT, MA, ME, NH, NJ, NY, PA, RI, VT
South: AL, AR, DC, DE, FL, GA, KY, LA, MD, MS, NC, OK, SC, TN, TX, VA, WV
Midwest: IA, IL, IN, KS, MI, MN, MO, ND, NE, OH, SD, WI
West: AK, AZ, CA, CO, HI, ID, MT, NV, NM, OR, UT, WA, WY

The values for CENREG are:

1 = Northeast
2 = South
3 = Midwest
4 = West

DADEMPLD is the work status of the father (birth father/adoptive father/stepfather/foster father/male guardian) in the household. It was constructed from DADWORK (O7), the work status in the previous week, and DADHOURS (O9), the number of hours usually worked for pay each week. Cases in which the father/male guardian was on leave, DADLEAVE (O8), were included. Cases in which he was looking for work, DADLOOK (O10), using active methods to find employment, as indicated by DADPUBL, DADPRIV, DADEMPL, DADREL, or DADANSAD (O11), were also classified by this variable. This variable is inapplicable if the child's father/male guardian does not live in the household.

The values for DADEMPLD are:

1 = Working 35 hours per week or more
2 = Working less than 35 hours per week
3 = Looking for work
4 = Not in labor force
-1 = No father/male guardian for the subject in household

DISABLTY indicates whether the child currently has a disability. It was derived using HDLEARN, HDRETARD, HDSPEECH, HDDISTRB, HDDEAF, HDHEAR, HDBLIND, HDVISUAL, HDORTHO, HDDEVEL, and HDOTHER (M4, M6).

The values for DISABLTY are:

1 = child currently has a disability
2 = child does not currently have a disability

FAMILY consists of a set of family type categories using both parent and sibling information. It was created using HHPARN1 and NUMSIBS, which are other derived variables. Nonparent guardians are included in the "other" category. Nonparent guardians are persons other than mothers and fathers (birth, adoptive, step, or foster), such as grandparents, aunts or uncles.

The values for FAMILY are:

1 = Two parents and sibling(s)
2 = Two parents, no sibling
3 = One parent and sibling(s)
4 = One parent, no sibling
5 = Other

HH10UNDR is a counter-derived variable indicating the total number of household members age 10 or younger.

HH18OVER is a counter-derived variable indicating the total number of household members age 18 and older.

HHDAD indicates whether the birth, adoptive, step, or foster father of the subject resides in the household with the subject child. This variable was created during the interview and stored in the CATI database; therefore no SAS code was needed to create this variable. There also is no "D" (designating a derived variable) in the variable label.

The values for HHDAD are:

1 = Father resides in the household
2 = No father and no mother in the household; male respondent
3 = Otherwise

HHMOM indicates whether the birth, adoptive, step, or foster mother of the subject resides in the household with the subject child. This variable was created during the interview and stored in the CATI database; therefore no SAS code was needed to create this variable. There also is no "D" (designating a derived variable) in the variable label.

The values for HHMOM are:

1 = Mother resides in the household
2 = No mother and no father in the household; female respondent
3 = Otherwise

HHPARN1 is a broad classification of the child's parents who reside in the household. It was constructed using HHMOM and HHDAD, both derived variables.

The values for HHPARN1 are:

1 = Mother (birth, adoptive, step, or foster) and father (birth, adoptive, step, or foster)
2 = Mother (birth, adoptive, step, or foster) only
3 = Father (birth, adoptive, step, or foster) only
4 = Nonparent guardians

HHTOTAL is a counter-derived variable indicating the total number of household members.

HHUNDR18 is a counter-derived variable indicating the total number of household members younger than 18 years old.

KINDTYPE is for kindergartners and primary school students. It categorizes the kindergarten the child currently attends or attended. This variable was a composite of KPPUBL (B6), KPCHOICE (B7), and KPRELGON (B8).

The values for KINDTYPE are:

1 = Public, assigned
2 = Public, chosen
3 = Private, church-related
4 = Private, not church-related
-1 = Infant/toddler, preschooler, or home schooler/Did not attend kindergarten

LANGUAGE describes the language(s) spoken most often at home by the parent(s)/guardian(s) in the household. It was derived from MOMLANG (N3), DADLANG (O1), MOMSPEAK (N4), and DADSPEAK (O2).

The values for LANGUAGE are:

1 = Both/only parents' main language at home is English
2 = One of two parents speaks a non-English language most at home
3 = Both/only parent(s) speak a non-English language most at home

MOMEMPLD is the work status of the mother (birth mother/adoptive mother/ stepmother/foster mother) or female guardian in the household. It was constructed from MOMWORK (N9), the work status in the previous week, and MOMHOURS (N11), the number of hours usually worked for pay each week. Cases in which the mother/female guardian was on leave, MOMLEAVE (N10), were included. Cases in which she was looking for work, MOMLOOK (N14), and using active methods to find employment, as indicated by MOMPUBL, MOMPRIV, MOMEMPL, MOMREL, or MOMANSAD (N15), were also classified by this variable. This is inapplicable if the child's mother/female guardian does not live in the household.

The values for MOMEMPLD are:

1 = Working 35 hours or more per week
2 = Working less than 35 hours per week
3 = Looking for work
4 = Not in the labor force
-1 = No mother/female guardian for the subject child

MOMFTFY indicates if the mother (birth mother/adoptive mother/stepmother/foster mother) or female guardian currently works full time and has worked 12 months during the past year. While this measure has some limitations, since it is not known if the mother was employed full-time for the entire year, it is consistent with a measure created from the CPS to classify mothers as full-time, full-year labor force participants. This variable was constructed using MOMWORK (N9), MOMEMPLD, a derived variable, and MOMMTHS (N13). This variable is inapplicable if the child's mother/female guardian does not live in the household.

The values for MOMFTFY are:

1 = Full time (35 hours or more) full year
2 = Less than full time or less than full year
3 = Not employed during year
-1 = No mother/female guardian for the subject child

MOSTHRS indicates the nonparental care or program arrangement (other than school) in which the child spends the most hours per week. Arrangements that take place less often than every week but at least once each month were included in the derivation of this variable using the following procedures: the number of hours each month were divided by four (weeks) to obtain the *average* number of hours per week; this average was then eligible to be classified as the arrangement with the most hours per week. Children whose only arrangements take place less often than once each month are coded 0 on this variable. MOSTHRS was derived using RCHRS1-RCHRS4 (D14), NCHRS1-NCHRS4 (E13), HSHRS (F13), and CPHRS1-CPHRS3 (G22) for weekly arrangements and using RCHRSWK1-RCHRSWK4 (D17), RCWKSMO1-RCWKSMO4 (D15), NCHRSWK1-NCHRSWK4 (E16), NCWKSMO1-NCWKSMO4 (E14), HSHRSWK (F16), HSWKSMO (F14), CPHRSWK1-CPHRSWK3 (G25), CPWKSMO1-CPWKSMO3 (G23) for monthly arrangements.

The values for MOSTHRS are:

0 = No nonparental care arrangement/program
1 = Relative care in child's home
2 = Relative care in another home
3 = Nonrelative care in child's home
4 = Nonrelative care in another home
5 = Head Start program
6 = Center-based program
7 = Equal hours in 2 or more types of care

Note that the number of cases for whom MOSTHRS=0 (n=6689) does not equal the number of cases for whom ANYCARE=2 (n=6622). This is because cases whose only arrangements take place less often than once each month are coded 1 on ANYCARE and 0 on MOSTHRS.

NUMSIBS is a counter-derived variable indicating the total number of siblings with whom the subject child lives.

PARGRADE designates the highest level of education for the child's parents or nonparent guardians who reside in the household. PARGRADE is based on the mother's (birth mother/adoptive mother/stepmother/foster mother) or female guardian's education level, MOMGRADE (N7), and the father's (birth father/adoptive father/stepfather/foster father) or male guardian's education level, DADGRADE (O5). If the respondent indicated that either parent/guardian completed less than the 12th grade, MOMDIPL (N8) and DADDIPL (O6) determined the completion of a high school diploma or equivalent (i.e., a GED). If only one parent or guardian resides in the household, PARGRADE reflects that parent's education level.

The values for PARGRADE are:

1 = Less than high school
2 = High school graduate or equivalent
3 = Vocational/technical education after high school or some college
4 = College graduate
5 = Graduate or professional school

PRIMARNG indicates the type of primary care or program arrangement of the child. This variable identifies the type of care arrangement, program, or activity (e.g., school) in which the child is participating for the most number of hours when his or her mother is at work or school. It was derived from MOMCARE (N20).

The values for PRIMARNG are:

0 = No regular primary care arrangement or program
1 = Relative care in child's home
2 = Relative care in another home
3 = Nonrelative care in child's home
4 = Nonrelative care in another home
5 = Head Start program
6 = Center-based program
7 = Attending kindergarten or primary school
8 = Mother works at home/cares for child at work or school
9 = Other parent cares for child
10 = Child cares for himself or herself
11 = Mother is on maternity leave
-1 = No mother in the household/mother not employed or enrolled in school

RACEETHN is a composite of the variables CRACE (A3) and CHISPANI (A4). It denotes both the race and ethnicity of the child. If the subject's ethnicity is Hispanic, RACEETHN is Hispanic regardless of whether RACE was classified as white, black, or other.

The values for RACEETHN are:

1 = White, non-Hispanic
2 = Black, non-Hispanic
3 = Hispanic
4 = All other non-Hispanic races (e.g., American Indian or Alaska Native, Asian or Pacific Islander)

SCHLTYPE classifies the type of school primary school children attend as either a public or a private school from PPUBL (C2). If the school was classified as public, it was further classified as either assigned or chosen from PCHOICE (C3). If the school was classified as private, it was further classified as either church-related or not church-related from PRELGON (C4).

The values for SCHLTYPE are:

1 = Public, assigned
2 = Public, chosen
3 = Private, church-related
4 = Private, not church-related
-1 = Not primary school path

SCNDARNG indicates the secondary care or program arrangement of the child. This variable identifies the care arrangement, program, or activity (e.g., school) in which the child is participating for most of the hours his or her mother is at work or school that are not covered by the primary arrangement (PRIMARNG). It was derived from MOMCARWH (N22).

The values for SCNDARNG are:

0 = No regular secondary care arrangement/program
1 = Relative care in child's home
2 = Relative care in another home
3 = Nonrelative care in child's home
4 = Nonrelative care in another home
5 = Head Start program
6 = Center-based program
7 = Attending kindergarten or primary school
8 = Mother works at home/cares for child at work or school
9 = Other parent cares for child
10 = Child cares for himself or herself
11= Mother is on maternity leave
-1 = No mother in the household/mother not employed or enrolled in school

ZIP18PO2 is a linked-derived variable that categorizes the percentage of families with children under age 18 in the subject's ZIP Code who are below the 1989 poverty line. It was created using the respondent's ZIP Code to extract data from the 1990 Census of Population Summary Tape File 3B (STF3B). The Census Bureau has at the core of its poverty line definition the 1961 economy food plan, the least costly of four nutritionally adequate food plans designed by the Department of Agriculture. It was determined from the Agriculture Department's 1955 survey of food consumption that families of three or more persons spend approximately one-third of their income on food; hence, the poverty line for these families was set at three times the cost of the economy food plan. For smaller families and persons living alone, the cost of the economy food plan was multiplied by factors that were slightly higher to compensate for the relatively larger fixed expenses for these smaller households. The poverty line cut-offs are revised annually to allow for changes in the cost of living, as reflected in the Consumer Price Index.

The values for ZIP18PO2 are:

1 = Less than 5 percent
2 = 5 - 9 percent
3 = 10 - 19 percent
4 = 20 percent or more

ZIPBLHI2 is a linked-derived variable that categorizes the percentage of persons in the subject's ZIP Code who are black or Hispanic. It was created using the respondent's ZIP Code to extract data from the 1990 Census of Population Summary Tape File 3B (STF3B).

The values for ZIPBLHI2 are:

1 = Less than 6 percent
2 = 6 - 15 percent
3 = 16 - 40 percent
4 = 41 percent or more

ZIPURBAN is a linked-derived variable that categorizes the subject's ZIP Code as urban or rural. It was created using the respondent's ZIP Code to extract data from the 1990 Census of Population Summary Tape File 3B (STF3B). Urban is further broken down into inside urbanized area (UA) and outside of UA.

The definitions for these categories are taken directly from the 1990 Census of Population. A UA comprises a place and the adjacent densely settled surrounding territory that together have a minimum population of 50,000 people. The term "place" in the UA definition includes both incorporated places, such as cities and villages, and Census-designated places (unincorporated population clusters for which the Census Bureau delineated boundaries in cooperation with state and local agencies to permit tabulation of data for Census Bureau products). The "densely settled surrounding territory" adjacent to the place consists of contiguous and noncontiguous territory of relatively high population density within short distances. The specific density and distance requirements are defined in the *Federal Register*, Vol. 55, No. 204.

The second category is urban, outside of UA. This category includes incorporated or unincorporated places outside of a UA with a minimum population of 2,500 people. One exception is for those who live in extended cities.[5] Persons living in rural portions of extended cities are classified as rural rather than urban. Places not classified as urban are rural.

Since a ZIP Code can cut across geographic areas that are classified in any of the three categories, the ZIPURBAN variable is classified into the category that has the largest number of persons. For example, if a ZIP Code has 5,000 persons in the first category (urban, inside UA), 0 persons in the second category (urban, outside UA), and 1,200 persons in the third category (rural), it is classified as inside UA.

The values for ZIPURBAN are:

1 = Urban, inside UA
2 = Urban, outside UA
3 = Rural

6.1.5 Weighting and Variance Estimation Variables

The first variable in this section of the file is EWEIGHT. It is the variable that should be used as the weight variable to estimate the characteristics of children 0 years old to 10 years old who were enrolled in 3rd grade or below. This weight contains all of the adjustments for the probabilities of selection, nonresponse, and undercoverage as described in chapter 3.

The 50 replicate weights, ERPL1 to ERPL50, are the next variables in this section. These replicate weights can be used with the WesVarPC Windows-based software program (Brick et al. 1995) to produce estimates of the sampling errors of the estimates. The JK1 option must be used to correctly estimate the sampling errors using this approach. More details on the replicate weights are given in chapter 3.

The remaining two variables in this section are STRATUM and PSU. These variables are provided to enable users to compute sampling errors using Taylor Series approximations, such as the SUDAAN procedure (Shah et al. 1995). The variables STRATUM and PSU and their use in SUDAAN are also discussed in chapter 3.

6.1.6 Imputation Flag Variables

Item nonresponse occurred when some, but not all, of the responses were missing from an otherwise cooperating respondent. For all the items on the public use file, the missing data were imputed, or "filled in," to help users of the data. For each variable involved in imputation, an imputation flag variable was created. If there is no imputation flag, then no imputation was performed on that variable. Section 3.5 discusses the meaning of values assigned to the imputation flags.

---

[5] An extended city is either an incorporated place of any population size inside a UA, or an incorporated place with a population of 2,500 or more people outside a UA that contains one or more component rural areas. Each component rural area must have a population density of less than 100 people per square mile, consist of at least one entire Census block, and include at least 5 square miles of continuous area. An extended city can have both urban and rural population and land areas.

The naming convention for the imputation flag variables was to drop the last letter of the variable name and replace it with an "f." The imputation flags appear on the file in the same order as the items appear in the questionnaire. This naming convention holds true for all ECPP variables except for variables that originally end in "f," variables that will become confused with other variables when the last letter is dropped, or variables that end in a number. In these cases, the letter before the last digit is dropped and replaced with an "f."

Although the ZIP Code variable (HZIPCODE) is not included on the public use data file, there was an imputation flag variable (HZIPCODF) created to indicate that the data were imputed. The HZIPCODE variable was used to create the variables ZIPURBAN, ZIPBLHI2, and ZIP18PO2.

6.1.7 Other Flag Variables

There is one other flag variable on the ECPP file called EARNFLAG. This flag indicates whether or not the variable MOMEARN, mother's earnings, was truncated for confidentiality purposes. See section 7.1.7 for further discussion of this flag variable.

6.1.8 RECNUM (record number)

RECNUM is a variable that appears in the last column of each record in the ECPP data file (i.e., column 1024). Its value equals the record on which it appears. In the ECPP data file, there are four records.

6.1.9 Numeric and Character Variables

Most of the variables in the ECPP public release file have numeric formats. However, a few have character formats. The variables that have character formats are as follows: MAINRSLT, GRADE (A11), GRADEEQ (A12), LASTGRAD (A19), MOMCARE (N20), MOMCARWH (N22), and ALLGRADE, a derived variable.

6.2 Guide to the Codebook

The codebook, shown in appendix D, contains complete descriptions of the contents of the data file. There is a single codebook for the ECPP file. The codebook contains system variables, household membership variables, questionnaire item variables, derived variables, weighting and variance estimation variables, and imputation flag variables. The codebook provides all the pertinent information for the variables in the files, including the variable name, the question wording, the position and format of the variable in the file, and the responses to the item. The unweighted frequency, unweighted percent, and weighted percent are provided along with each response. Figure 6-1 provides a description of each of the items appearing in the codebook.

Figure 6-1.–Example of the codebook format

(1) KPPUBL = (2) B6-PUBLIC OR PRIVATE KINDERGARTEN

(3) B6 (Does/Did) (CHILD) attend a public or private (kindergarten/prefirst grade)?

(4) RECORD: 1 POSITION: 158-159
(5) FORMAT: N2

(6) RESPONSE	(7) CODES	(8) FREQ	UNWGTD (9) PERCENT	WGTD (10) PERCENT
1 PUBLIC	1	5282	37.6%	85.2%
2 PRIVATE	2	1030	7.3%	14.8%
RESERVED CODES:				
-1 INAPPLICABLE	-1	7752	55.1%	(MISS)
TOTALS:		14064	100.0%	100.0%

DESCRIPTIONS:

(1) Variable name: This is the variable name associated with each item. This is the unique identifier present in the SAS or SPSS data file.

(2) Variable label: A short label, which is associated with each of the variables, is presented here. This label appears in the SAS or SPSS data file. Labels contain the questionnaire item numbers. Labels that begin with the letter "D" indicate a derived variable.

(3) Question wording: This is the exact question wording as it appeared in the questionnaire.

(4) Record and position: These provide the record number (1-4) and the starting and ending column position of the variable in the raw (ASCII) data file.

(5) Format: This provides the variable type, its width, and the number of positions after the decimal point, if necessary. The data type of "N" represents numeric variables and "A" represents character variables. In this example, KPPUBL is a numeric variable with a length of 2.

(6) Response categories: This column provides the response categories for the variable.

(7) Response codes: This column provides the actual numeric/alphanumeric codes present in the data file.

(8) Unweighted frequency counts: This column displays the unweighted frequency counts for this variable.

(9) Unweighted percentages: This column displays the unweighted frequency counts from the previous column as percentages. This column will also contain percentages for missing values.

(10) Weighted percentages: This column displays the percentages of frequency counts weighted up to the population. This column will not include percentages for missing values.

6.3 Public and Proprietary Data Files

This manual is designed to assist users of the public use ECPP data file. The public use file contains all the variables detailed above but does not contain certain variables excluded from the file for confidentiality reasons. These include the names of household members, verbatim string responses that might identify persons or places, and respondents' individual ZIP Codes (HZIPCODE). Some of these variables (e.g., verbatim strings, HZIPCODE) that are excluded from the public file are included on a separate proprietary, or restricted-use, file. These variables are indicated with a "/R" on the ECPP questionnaire in appendix A. The proprietary data file also contains close to 100 "ZIP Code" variables from the 1990 Census of the Population Summary Tape File 3B (STF3B), including the median household income of the area, the level of community mobility in the area, and the percentage of owner-occupied households in the area. The proprietary data file may be obtained through a special licensing agreement with NCES. Contact NCES for details on how to become licensed.

7. DATA CONSIDERATIONS AND ANOMALIES

The purpose of this section is to bring to the user's attention certain data considerations and data anomalies in the NHES:95 ECPP survey data; to describe the nature of those anomalies; and, where appropriate, to suggest possible means of taking them into account when analyzing the ECPP data. This section also compares the NHES:95 ECPP data to data from the Early Childhood Education component in the NHES:91, including a discussion of the ages of children included in each of the samples, questionnaire design differences, and variance estimation for estimates from each data set. Information regarding how the ECPP data compare to data from other sources may be found in a Working Paper entitled *Comparison of Estimates from the 1995 National Household Education Survey* (Collins et al. forthcoming).

7.1 Specific Data Considerations and Anomalies

7.1.1 Hours in Primary School

At item PHRS (C7), respondents were asked to report the number of hours per week primary schoolers attend school. There are 72 cases in which the number of hours reported is less than 25 hours per week, a smaller number of hours than would be expected for most first to third graders. Among these cases, a few (n=17) were reported to have disabilities, which may suggest that these children have alternative school schedules. However, in none of the 72 cases were the children reported to have a grade in school of "special education." It may be that in some cases, the number of hours reported is actually the number of hours *per day* that the child attends primary school. There was an on-line edit check for this variable in the CATI system to reduce reporting and recording errors. With this edit mechanism, interviewers were alerted to verify any response of less than 25 hours with respondents before final entry of the response. Data user's should consider editing the lowest outlying values (i.e., 6, 7, or 8 hours, reported for 41 cases), since it is possible that these are reports of time spent at school per day, rather than per week. One approach would be to set these values to the average number of hours reported. Another approach would be to impute other values for these cases, for example, using a "nearest-neighbor" procedure. Using this procedure, cases are sorted on selected characteristics (e.g., grade, public/private school control) and the value of PHRS for the closest appearing case in the data file with the same sort characteristics is copied.

7.1.2 Center-based Program Participation

Early in the interview, respondents were asked to report whether their child was attending school (variable ENROLL (A9)) and, if so, their child's current grade (GRADE (A11) or GRADEEQ (A12)). (When the ECPP respondent had also been the Screener respondent, this information was collected in parallel items in the Screener and not asked again in the extended interviews.) Many parents reported at this stage that their child was enrolled in a nursery school, preschool, Head Start, or prekindergarten program (GRADE, GRADEEQ, or ALLGRADE (derived variable) = N). Some parents reported later in the interview that their child was participating in a Head Start program or in a center-based program including a day care center, nursery school, prekindergarten, or preschool (variables HSNOW (F1) or CPNNOW (G1)). There is some inconsistency between the responses to these items.

In 216 cases, preschoolers were reported as not being enrolled in school, but were later reported as participating in Head Start, a center-based program, or both. In 72 cases, children were reported as enrolled in school with a grade of N (nursery school, preschool, prekindergarten, Head Start), but were later reported as not being enrolled in either a Head Start program or a center-based program.

Some parents may think of nursery school or prekindergarten as "school," but may not think of day care centers as "school." However, information on all center-based programs was collected together as the result of experience with previous NHES studies and cognitive laboratory work indicating that parents perceive few differences between various types of center-based programs, and that classification of programs as "nursery school" as separate from a "day care center" is very difficult. A small number of parents may not think of nursery school or prekindergarten as "school," and only reported grades between kindergarten and 12th grade as "school." Evidence from previous surveys, including the NHES:91, indicate that most parents do consider nursery school and prekindergarten programs to be school.

In conducting analyses of center-based program participation among preschoolers, we recommend that users employ the questionnaire variables HSNOW and CPNNOW. This approach is more inclusive, since it encompasses all forms of center-based early childhood programs, including day care centers, which some parents do not report as "school." ALLGRADE is a less comprehensive measure for preschoolers.

7.1.3 Frequency of Participation in Child Care Arrangements and Programs

The ECPP questionnaire collected very specific information as to the frequency with which children participate in child care arrangements and programs. This allows data users to limit their analyses of arrangements according to their frequency, for example, one may want to restrict their data analyses to arrangements that took place at least once each week. However, data users should note that there are some cases in which inconsistencies occurred in reporting the number of weeks per month arrangements or programs take place. In a very small number of cases, it was indicated that the care arrangement or program did *not* take place at least *once each week* (e.g., RCWEEK1 (D11) = 2), but *did* take place at least *once each month* (e.g., RCMONTH1 (D12) = 1) for *four weeks per month* (e.g., RCWKSMO1 (D15) = 4). This occurred 7 times in the relative care section at RCWKSMO1 and RCWKSMO2, 2 times in the nonrelative care section at NCWKSMO1 (E14), and 2 times in the Head Start program section at HSWKSMO (F14).

7.1.4 Primary and Secondary Arrangements

The items MOMCARE (N20) and MOMCARWH (N22) collect information on the arrangements or programs that occupy the most of children's time while their mothers (or female guardians) are at work or in school. Responses to these items include school, another parent, and any arrangements reported in the relative, nonrelative, Head Start, and Center-based care sections of the questionnaire. However, there is also a category 91 labeled "Something else" for MOMCARE and MOMCARWH. For all entries into this category, a verbatim description of the type of arrangement (e.g., grandmother, day care center) was gathered, and some followup questions were asked to determine if the child participated on a regular basis, the location of the arrangement or program, and the number of days and hours per week the child participated. This information was examined for each case entered in the "91=Something else" category. If it was indicated that the child participated in the specified arrangement or program on a regular basis, the data for the case was examined and MOMCARE or MOMCARWH was updated to the appropriate category. The "91" codes that remain for variables MOMCARE and MOMCARWH are all arrangements or programs that were reported in the followup questions to not take place on a regular basis. These arrangements are in turn coded 0 on the derived variables PRIMARNG and SCNDARNG, representing no regular primary or secondary arrangement.

Another situation that arose with these items was reports of similar arrangements that alternate weeks for the same number of hours per week (e.g., receiving care from two grandmothers on alternating weeks). This type of care arrangement schedule occurred in only 5 cases, but made the classification of the primary and secondary arrangement ambiguous for them. Therefore, in these cases the arrangement reported first was classified as the primary arrangement and the arrangement reported second was classified as the secondary arrangement.

7.1.5 Hours of Participation in and Cost of Child Care Arrangements and Programs

It is not uncommon for variables to contain values beyond the range of the majority of responses. Variables in the ECPP data file pertaining to the number of hours and the cost of arrangement do contain some relatively high values. However, it is important to note that on-line range edits were installed on the CATI system for all the hours and cost items, so that interviewers were prompted to verify any response outside a reasonable range before it was finally entered. In addition, all cases for which the total number of hours per week in care arrangements or programs (CAREHOUR, a derived variable) was greater than 40 hours among children in full-day kindergarten or primary school or greater than 70 hours among all other children were examined for errors, such as duplicate arrangements, which could erroneously inflate the total number of hours per week. All errors found were corrected. However, 112 cases exceeding the 40 hour/70 hour edit rule remain on the file. Data users should note that some of the outlying values for the hours of participation in care arrangements may involve situations in which children are cared for during an entire weekend, by grandparents, for example. Thus, users may want to examine certain characteristics of children's arrangements (e.g., the type, location, the number of days each week, whether it takes place during school days or weekends) before deciding on the appropriate measures for handling these outliers in their analyses.

7.1.6 Truncation of Hours in Care Arrangements and Hours Parents Work for Pay

The variables indicating the number of hours that children spend in care arrangements or programs are truncated to 99 hours. There are very few cases with a value of 99 at these variables (7 cases at RCHRS1 (D14) and 2 cases at NCHRS1 (E13)). In these cases, either the respondents reported 99 hours or they reported a higher number of hours that was truncated to 99 hours. The same is true for variables indicating the number of hours per week mothers and fathers usually work at their jobs. There are 3 cases for MOMHOURS (N11) and 28 cases for DADHOURS (O9) that were coded 99 hours.

7.1.7 Truncation of Mother's Earnings Variable (MOMEARN)

For disclosure reasons, that is, to minimize data users' ability to identify specific survey participants, MOMEARN (N12) was truncated to $100,000 per year. For cases in which mothers' earnings were reported in units other than "per year," mothers' yearly earnings was approximated assuming full-year employment. Then, for all cases with earnings higher than $100,000 per year, MOMEARN was set to 100,000 and MOMUNIT was set to 6 (per year). There is a flag on the data file that identifies the cases for which MOMEARN was truncated, called EARNFLAG (1=truncated; 0=not truncated). As EARNFLAG indicates, MOMEARN was truncated for 26 cases.

7.1.8 Ages of Birth Mothers and Birth Fathers

There are a few cases where the ages of birth mothers and birth fathers are somewhat older than one might expect, given that all children included in the ECPP study are age 10 or younger. Specifically, there are 3 cases where birth mothers are reported to be 60 years old or older; and there are 17 cases where birth fathers are reported to be 60 years old or older. These may be persons who are considered primary guardians of the children but who are not actually birth parents. Data users interested in the birth parent relationship may wish to examine these cases in more detail.

7.1.9 Mothers' and Fathers' Specific Relationships to Subject Children

There are also a few cases where the detailed relationships of mothers and fathers to the ECPP subject children are unusual. Specifically, in one case a child was reported to have a foster mother and a birth father at home. Also, in 14 cases children were reported to have a birth mother and foster father. Data users interested in foster parent relationships should exercise caution when using these cases. These are certainly unusual situations and suggest that these reported "foster" parents may not be foster parents in the traditional sense, but rather a partner of the birth parent or some other type of guardian.

7.2 Differences from the NHES:91 Early Childhood Component

Some users of the NHES:95 ECPP data may wish to make comparisons with data from the early childhood component of the NHES:91, the last NHES survey also addressing the topic of child care arrangements and early childhood programs in more detail. Therefore, it is important to point out some important differences between the two surveys. Outlined below are some issues related to the overall structure of each data file plus issues concerning care arrangement and program participation data, for example, differences in the populations studied and significant questionnaire design differences. Also included is a discussion of variance estimation for estimates from the two data sets. There are certainly some other differences between the NHES:95 and the NHES:91 data besides that discussed below. Data users can obtain further information about the NHES:91 data set from the *NHES:91 Preprimary and Primary Data Files User's Manual* (Brick et al. 1992).

7.2.1 Samples and Data File Organization

There are some differences in the ages of children included in the NHES:91 and NHES:95, as well as some differences in the organization of the data files for each survey. The NHES:91 sample included children age 3 to 8 years old as well as 9-year-olds who were in first or second grade, while the sample for the NHES:95 included a broader age range of children: newborn to 10 years old and in third grade or below. For each survey, the total sample of children was divided into subgroups, or "paths," according to their age and grade (or grade equivalent); these path assignments determined the questions appropriate for administration during the interviews. For the NHES:91, children were assigned to either the "preprimary" or "primary" path. The preprimary path included children not yet in first grade and the primary path included children in first grade or above. Each of these paths had its own questionnaire and data file. The NHES:91 preprimary and primary data files can be merged together to create a single file including all children in the NHES:91 survey.

In contrast, one questionnaire and one data file were created for the ECPP component of the NHES:95 survey. Also, children sampled for the NHES:95 were assigned to five different interview paths: "infant/toddler" (newborn to 2-year-olds), "preschooler" (3- to 5-year-olds not yet in kindergarten), "kindergartner" (children currently enrolled in kindergarten and not being home schooled), primary schoolers (children currently enrolled in first, second, or third grade and not being home schooled), and home schoolers (children being home schooled with grade equivalents of kindergarten, first, second, or third grade). These paths directly correspond to the values of the variable MAINRSLT.

7.2.2 Current Participation in Nonparental Care Arrangements and Programs

There are also differences between the NHES:91 and NHES:95 as far as the populations for whom data on current participation in arrangements and programs were collected. In the NHES:91, information on current participation was collected only for children in the preprimary path, that is, preschoolers (3- to 5-year olds not yet in kindergarten) and kindergartners. Questions for children in the primary grades pertained only to participation in care and programs before entering first grade. In contrast, the NHES:95 gathered information on current participation for *all* children included in the study. However, questions in the NHES:95 also allow for the determination of children's participation in care and programs before school entry (this is discussed further in section 7.2.3 below).

Questionnaire items determining children's participation statuses in different types of care arrangements and programs also differ somewhat between the 1991 and 1995 surveys. The wording of items determining participation in care by relatives and nonrelatives was similar across the two surveys, but not identical. There are more notable differences between the two surveys as far as the items used to determine children's center-based program participation statuses. In the NHES:91, children's participation in center-based programs was determined by answers to four questions: one asking about participation in day care centers; one asking about participation in nursery schools, prekindergartens, or Head Start; one asking about kindergartners' participation in after-school programs; and one asking about any other type of care (which included participation in before/after school care). In contrast, the NHES:95 contained one item to determine children's participation in Head Start programs, and two subsequent questions (i.e., one for infants/toddlers and preschoolers and one for kindergartners, primary schoolers and home schoolers) to determine participation in any other type of center-based program including day care centers, nursery schools, preschools, prekindergartens, or before/after school programs.

The NHES:95 also differs from the NHES:91 with respect to the amount of information gathered about the care arrangements and programs in which children currently participate. The NHES:95 was designed to allow respondents to report multiple relative, nonrelative, and center-based child care arrangements, and then collect detailed information about the characteristics of each one reported. These characteristics included the location of arrangements, the number of children and caregivers/teachers at arrangements, the sources of knowledge about arrangements, and the cost of arrangements. In contrast, the NHES:91 did not allow for reports of multiple relative or nonrelative arrangements and gathered relatively limited information about these arrangement types, which only consisted of the location and the number of hours each week children participate in all relative and all nonrelative arrangements. The NHES:91 did allow for reports of multiple center-based programs, but again, the information gathered about each program was limited compared to that obtained in the NHES:95. On the other hand, the NHES:91 did collect some information regarding communications with teachers at centers that the NHES:95 did not collect.

7.2.3 Participation in Care Arrangements and Programs Prior to School Entry

Examining children's participation in care arrangements and programs prior to school entry may be of interest to some data users. To determine whether or not children in the NHES:95 participated in the various types of care arrangements before school entry, data users need to compare children's age at school entry (i.e., AGEENTER, a derived variable) with the age at which they first participated in the arrangement type (i.e., RCAGEYR, RCAGEMO (D3); NCAGEYR, NCAGEMO (E3); HSAGEYR, HSAGEMO (F3); CPNAGEYR, CPNAGEMO (G3); CPSAGEYR, CPSAGEMO (G7)).

Data users who wish to compare rates of participation prior to school entry *across* the NHES data files should note that this method of determining participation status is very different than for previous NHES data sets, and may result in different estimates. The NHES:91 (and NHES:93) contained direct questions asking whether children had participated in arrangements before they started grade school. Again, the NHES:95 instead obtained the ages at which children first started school and first participated in arrangements or programs. It is also worth pointing out, however, that the NHES:95 survey did contain a question that confirmed the sequence of children's ages at school entry and ages at first participation in center-based programs (item G8 in the ECPP questionnaire).

7.2.4 Additional NHES:95 Features

There are two other features of the NHES:95 data pertaining to child care and early childhood programs that were not included in the NHES:91. One is a series of questions about parents' preferences for their children's arrangements or programs. The NHES:95 asked parents to report the relative importance of several characteristics that they may have considered when selecting arrangements or programs for their children, such as the proximity of arrangements to home and whether caregivers have had special training for taking care of children. The NHES:95 also included questions that identify the child care arrangements or programs in which children participate while their mothers are at work or at school; similar questions did not appear in the NHES:91.

7.2.5 NHES:91 and NHES:95 Variable Names

Given these differences in survey design between the NHES:91 and NHES:95, please note that when the same variable names appear in the two data files, this does not mean that the variables represent the same population of children or that the source questionnaire items were asked in the same way in each survey. An example is the derived variable ANYCARE, which identifies whether or not children are currently participating in any type of care arrangement or program (i.e., relative, nonrelative, Head Start, or another center-based program). The ANYCARE variable has the same name in both the

NHES:91 and NHES:95, but they each apply to children of different ages and are based on different questionnaire items.

7.2.6 Variance Estimation for the NHES:91 and NHES:95

For both the NHES:91 and NHES:95 data sets, the calculation of sampling errors for estimates cannot be based on the assumptions of simple random sampling of children. The NHES:91 utilized a clustered, random digit dialing design for sampling households and the NHES:95 used a list-assisted sample design. In addition, the methods for sampling children within households differed between the two surveys (see chapter 3 in this manual and chapter 3 in the *NHES:91 Preprimary and Primary Data Files User's Manual* (Brick et al. 1992) for more details about sampling households and children for each survey). However, the same methods can be used to compute sampling errors of estimates from the NHES:91 and NHES:95 data sets. One approach is the jackknife replication method. Replicate weights are available in each data set for use in calculating sampling errors using the WesVarPC Windows-based software. For the NHES:91, these weights are called EWREPL1 - EWREPL50; for the NHES:95 the weights are called EREPL1 - EREPL50. When using the WesVarPC software for both the NHES:91 and NHES:95 data sets, the JK1 option should be used. (Chapter 3 explains how to obtain a copy of WesVarPC free of charge.)

Another method for computing sampling errors of estimates from the NHES:91 and NHES:95 data is Taylor series approximation. The software available that utilizes this method, such as SUDAAN, typically requires a stratum and a PSU variable. Both the NHES:91 and NHES:95 data sets contain such variables. However, note that because of differing sample designs, the number of values for the stratum and PSU variables are also different. In the NHES:91 preprimary and primary data sets, the PSU variable (called PSU) has two possible values and the stratum variable (called VSTRAT) has 50 values. In the NHES:95 ECPP data set, the PSU variable (also called PSU) has several thousand possible values and the stratum variable (called STRATUM) has two possible values. As discussed in chapter 3, the appropriate statements to use in SUDAAN for the NHES:95 data include DESIGN=WR and NEST STRATUM PSU. For the NHES:91, the following statements should be used in SUDAAN: DESIGN=WR and NEST VSTRAT PSU. Again, more information on sample design and calculation of sampling errors can be found in chapter 3 in the user's manuals for each data set.

APPENDIX A

BASIC SCREENER, EXPANDED SCREENER, AND ECPP QUESTIONNAIRE

NHES:95 Basic Screener

S1. Hello, my name is (INTERVIEWER) and I'm calling for the U.S. Department of Education. We are conducting a voluntary and confidential study about the educational experiences of both adults and children. These first questions usually take about 5 minutes. Are you a member of this household and at least 18 years old?

YES	1	(GO TO S5)
NO	2	(GO TO S2)
BUSINESS	3	(GO TO S5)
GO TO RESULT	GT	
RETRY AUTODIALER	RT	

S2. May I please speak with a household member who is at least 18 years old?

AVAILABLE	1	(GO TO S1)
NOT AVAILABLE	2	(GO TO RESULT, CALLBACK APPT.)
THERE ARE NONE	3	(GO TO S3)
GO TO RESULT	GT	

S3. May I please speak with the male or female head of this household?

PERSON ON PHONE	1	(GO TO S5)
OTHER PERSON, AVAILABLE	2	(GO TO S4)
OTHER PERSON, NOT AVAILABLE	3	(GO TO RESULT, CALLBACK APPT.)
GO TO RESULT	GT	

S4. Hello, this is (INTERVIEWER) and I'm calling for the U.S. Department of Education. We are conducting a voluntary and confidential study about the educational experiences of both adults and children. This study will help the Department of Education plan educational programs in the U.S. These first questions usually take about 5 minutes. Are you a head of this household?

YES	1	(GO TO S5)
NO	2	(GO TO S3)
GO TO RESULT	GT	

S5. I would like to confirm that this number is for home use rather than only used for business. (Is this a home phone?)

HOME USE	1	(CONTINUE)
HOME AND BUSINESS USE	2	(CONTINUE)
BUSINESS USE ONLY	3	(GO TO THANK1)
GO TO RESULT	GT	

S6. Starting with yourself, please tell me just the first names and ages of all people who normally live in your household. What is your first name, please?

[HOUSEHOLD MEMBERS INCLUDE PEOPLE WHO THINK OF THIS HOUSEHOLD AS THEIR PRIMARY PLACE OF RESIDENCE. IT INCLUDES PERSONS WHO USUALLY STAY IN THE HOUSEHOLD BUT ARE TEMPORARILY AWAY ON BUSINESS, VACATION, IN A HOSPITAL, OR LIVING AT SCHOOL IN A DORMITORY, FRATERNITY, OR SORORITY.]

What is [your first name/the first name of the next person?]	How old [are you/is (he/she)]?	Is this person male or female?	SCREENER RESPONDENT
	MOMAGE ***DADAGE*** ***AGE1-AGE13*** ***ERESPAGE***	***SEX*** ***SEX1-SEX13*** ***ERESPSEX***	

S6VERF1. [VERIFY THE NUMBER OF HOUSEHOLD MEMBERS LISTED ON THE MATRIX.]
Have we missed anyone else who usually lives here who is temporarily away from home or living in a dorm at school, or any babies or small children?

MATRIX CORRECT	1
RETURN TO MATRIX	2
GO TO RESULT	3

Ask S7-S10 for each person age 3-10 and age 16-19. If none, go to 2nd box after S10.

S7. Is (PERSON) attending (school/nursery school, kindergarten, or school)?

YES	1	(GO TO BOX)
NO	2	(GO TO BOX)

Ask S8 for each person age 5-10. Else, if person is age 3 or 4 or age 16-19 and enrolled in school, go to S9. Else, if not enrolled in school, go to first box after S10.

S8. (READ FIRST TIME: Some parents decide to educate their children at home rather than sending them to school.) Is (CHILD) being schooled at home?

YES	1	(GO TO S10)
NO	2	(GO TO BOX)

If person is enrolled in school, ask S9. Else go to 1st box after S10.

S9. What grade or year is (PERSON) attending?
[PROBE FOR T OR P: Is that before or after kindergarten?]

NURSERY/PRESCHOOL/PREKINDERGARTEN/HEAD START	N	(GO TO BOX AFTER S10)
TRANSITIONAL KINDERGARTEN (BEFORE K)	T	(GO TO BOX AFTER S10)
KINDERGARTEN	K	(GO TO BOX AFTER S10)
PREFIRST GRADE (AFTER K)	P	(GO TO BOX AFTER S10)
FIRST GRADE	1	(GO TO BOX AFTER S10)
SECOND GRADE	2	(GO TO BOX AFTER S10)
THIRD GRADE	3	(GO TO BOX AFTER S10)
FOURTH GRADE	4	(GO TO BOX AFTER S10)
FIFTH GRADE	5	(GO TO BOX AFTER S10)
SIXTH GRADE	6	(GO TO BOX AFTER S10)
SEVENTH GRADE	7	(GO TO BOX AFTER S10)
EIGHTH GRADE	8	(GO TO BOX AFTER S10)
NINTH GRADE/FRESHMAN IN HIGH SCHOOL	9	(GO TO BOX AFTER S10)
TENTH GRADE/SOPHOMORE IN HIGH SCHOOL	10	(GO TO BOX AFTER S10)
ELEVENTH GRADE/JUNIOR IN HIGH SCHOOL	11	(GO TO BOX AFTER S10)
TWELFTH GRADE/SENIOR IN HIGH SCHOOL	12	(GO TO BOX AFTER S10)
UNGRADED ELEMENTARY/SECONDARY	U	(GO TO S10)
SPECIAL EDUCATION	S	(GO TO S10)
VOCATIONAL/TECHNICAL AFTER HIGH SCHOOL	15	(GO TO BOX AFTER S10)
COLLEGE (UNDERGRADUATE)	16	(GO TO BOX AFTER S10)
GRADUATE, PROFESSIONAL SCHOOL	17	(GO TO BOX AFTER S10)

[IF T: In this interview, we will be referring to that as "kindergarten."
IF P: In this interview, we will be referring to that as "prefirst grade."]

S10. What grade would (PERSON) be in if (he/she) were (attending school/attending a school with regular grades)?
[PROBE FOR T OR P: Is that before or after kindergarten?]

NURSERY/PRESCHOOL/PREKINDERGARTEN/HEAD START	N
TRANSITIONAL KINDERGARTEN (BEFORE K)	T
KINDERGARTEN	K
PREFIRST GRADE (AFTER K)	P

SECOND GRADE	2
THIRD GRADE	3
FOURTH GRADE	4
FIFTH GRADE	5
SIXTH GRADE	6
SEVENTH GRADE	7
EIGHTH GRADE	8
NINTH GRADE/FRESHMAN IN HIGH SCHOOL	9
TENTH GRADE/SOPHOMORE IN HIGH SCHOOL	10
ELEVENTH GRADE/JUNIOR IN HIGH SCHOOL	11
TWELFTH GRADE/SENIOR IN HIGH SCHOOL	12
UNGRADED/NO EQUIVALENT	U
VOCATIONAL/TECHNICAL AFTER HIGH SCHOOL	15
COLLEGE (UNDERGRADUATE)	16
GRADUATE, PROFESSIONAL SCHOOL	17

[IF T: In this interview, we will be referring to that as "kindergarten."
IF P: In this interview, we will be referring to that as "prefirst grade."]

Ask S7-S10 for next person age 3-10 or 16-19.
After last person, go to next box.

For splice sample, go to the sampling point.
Else, ask S11 and S12 for each person age 16 and older who is not currently enrolled in grade 12 or below, ungraded elementary or secondary, or special education.

S11. Now I have a few questions about [you/you and the other adult(s) in your household]. [Do you/Does (ADULT)] have a high school diploma or its equivalent, such as a GED?

YES	1
NO	2

S12. During the past 12 months [did you/did (ADULT)] take classes, programs, courses, workshops, or seminars of any kind for any reason?

YES	1
NO	2

After last adult, go to next box.

Sampling Point:
Select children and adults for extended interviews.
If any children are selected, go to next box.
If adults only are selected, go to box after S14.
If no one is selected, go to THANK2.

Ask S13 and S14 for each sampled child.
If there is only 1 household member 12 years old or older, autocode S13 to this adult.

S13. We would like to ask some questions about (CHILD'S) (care and) education. [IF SCREENER RESPONDENT IS OBVIOUSLY CHILD'S MOTHER, INSTEAD OF READING QUESTION, VERIFY RELATIONSHIP AND ENTER HER PERSON NUMBER.] Who is the parent or guardian in this household who knows the most about (CHILD'S) (care and) education?
[DISPLAY HOUSEHOLD MEMBERS 12 AND OLDER.]

PERSON NUMBER . . . . ☐☐

S14. What is [your/(CAREGIVER'S) relationship to (CHILD)?

ERESRELN

MOTHER (BIRTH/ADOPTIVE/STEP/FOSTER)	1
FATHER (BIRTH/ADOPTIVE/STEP/FOSTER)	2
BROTHER/SISTER	3
GRANDPARENT	4
OTHER RELATIVE	5
NONRELATIVE	6

Ask S15 for sampled adults other than the Screener respondent who are enrolled in college, graduate school, or vocational/technical school after high school and are age 16 to 19, or are age 20 to 25. For other sampled adults, go to S17.

S15. Is (ADULT) living there, in student housing, or somewhere else?

HERE	1	(GO TO S17)
STUDENT HOUSING [This includes all housing owned, sponsored, or leased by the school such as a dormitory or fraternity or sorority house.]	2	(GO TO S16)

COLLEGE (UNDERGRADUATE)	16
GRADUATE, PROFESSIONAL SCHOOL	17

[IF T: In this interview, we will be referring to that as "kindergarten."
IF P: In this interview, we will be referring to that as "prefirst grade."]

*If SX8 = 1 (in home school), go to first box after SX15.
Else, ask SX14.*

SX14. [Do you/Does (PERSON)] go to a public or a private school?

PUBLIC	1
PRIVATE	2

If SX9 or SX13 = N, T, or K or SX7 = 1 and AGE ≥16 (person enrolled in nursery school or kindergarten or age 16 or older and currently enrolled in school), then ask SX15. Else, go to first box after SX15.

SX15. [Are you/Is (PERSON)] now enrolled in school full time or part time?

FULL TIME	1
PART TIME	2

*Ask SX7 to SX15 for next person enrolled in school.
After last person, go to next box.*

If SX7 = 2 or SX9 or SX13 = 15, 16, 17, and AGE ≥ 16 (person age 16 and older who is not currently enrolled in grade 12 or below, ungraded elementary or secondary, or special education), then ask SX16 to SX18. Else, go to first box after SX18.

SX16. Now I have a few questions about [you/you and the other adults(s) in your household]. What is the highest grade or year of school that [you/(ADULT)] completed?

UP TO 8TH GRADE	1	(ENTER ACTUAL GRADE, GO TO SX17)
9TH TO 11TH GRADE	2	(ENTER ACTUAL GRADE, GO TO SX17)
12TH GRADE BUT NO DIPLOMA	3	(GO TO SX17)
HIGH SCHOOL DIPLOMA/EQUIVALENT	4	(GO TO SX18)
VOC/TECH PROGRAM AFTER HIGH SCHOOL BUT NO VOC/TECH DIPLOMA	5	(GO TO SX17)
VOC/TECH DIPLOMA AFTER HIGH SCHOOL	6	(GO TO SX17)
SOME COLLEGE BUT NO DEGREE	7	(GO TO SX16OV)
ASSOCIATE'S DEGREE	8	(GO TO SX17)
BACHELOR'S DEGREE	9	(GO TO SX18)
GRADUATE OR PROFESSIONAL SCHOOL BUT NO DEGREE	10	(GO TO SX18)
MASTER'S DEGREE (MA, MS)	11	(GO TO SX18)
DOCTORATE DEGREE (PHD, EDD)	12	(GO TO SX18)
PROFESSIONAL SCHOOL DEGREE AFTER BACHELOR'S DEGREE (MEDICINE/MD; DENTISTRY/DDS; LAW/JD/LLB; ETC.)	13	(GO TO SX18)

SX16OV. [Did you/did (ADULT)] earn a vocational or technical diploma after leaving high school?

YES	1
NO	2

SX17. [Do you/Does (ADULT)] have a high school diploma or its equivalent, such as a GED?

YES	1
NO	2

If SX7 = 1 (enrolled in school), autocode SX18 = 1.

SX18. During the past 12 months, [did you/did (ADULT)] take classes, programs, courses, workshops, or seminars of any kind for any reason?

YES	1
NO	2

Ask SX16 to SX18 for next person age 16 and older who is not currently enrolled in grade 12 or below, ungraded elementary or secondary, or special education. After last person, go to next box.

If AGE ≥16 (person age 16 or older), then ask SX21.
After last person, go to SX22.

SX21. What is [your/(ADULT'S)] marital status? [VERIFY IF KNOWN.]

MARRIED/REMARRIED	1
SEPARATED	2
DIVORCED	3
WIDOWED	4
NEVER MARRIED	5

SX22. (Are you/Is any member of your household) currently serving on active duty in the U.S. Armed Forces? [DO NOT INCLUDE RESERVES OR NATIONAL GUARD.]

YES	1	(GO TO SX22OV)
NO	2	(GO TO SX23)

SX22OV. Who is that? [DISPLAY HOUSEHOLD MEMBERS AGE 16 AND OLDER. CODE ALL THAT APPLY.]

PERSON NUMBER	☐☐	(INELIGIBLE)

SX23. (Were you/Was everyone in your household) born in this country, that is, in one of the 50 States or the District of Columbia?

YES	1	(GO TO SX24)
NO	2	(GO TO BOX AFTER SX24)

SX24. (Did you/Did every member of your household) learn English as (your/their) first language?

YES	1	(GO TO BOX AFTER SX26)
NO	2	(GO TO BOX)

If SX23 = 2 (not every household member was born in the U.S.), then ask SX25 for each person in the household; also ask SX26 for each person age 3 or older. If SX24 = 2 (not every household member learned English as their first language), ask SX26 for each person age 3 or older.

SX25. In what country [were you/was (PERSON)] born?

50 STATES OR THE DISTRICT OF COLUMBIA	1
U.S. TERRITORIES: PUERTO RICO, GUAM, AMERICAN SAMOA, U.S. VIRGIN ISLANDS, MARIANA ISLANDS, OR SOLOMON ISLANDS (SPECIFY)____________________	2
SOME OTHER COUNTRY (SPECIFY)____________________	3

SX26. What was the first language [you/(PERSON)] learned to speak?

ENGLISH	1
SPANISH	2
OTHER LANGUAGE	91

(SPECIFY)________________________________

Ask SX27 and SX28 for each person. After last person, go to first box after SX28 (Sampling Point).

SX27. [Are you/Is (PERSON)] white, black, American Indian or Alaska Native, Asian or Pacific Islander, or some other race?

WHITE	1
BLACK	2
AMERICAN INDIAN OR ALASKA NATIVE	3
ASIAN OR PACIFIC ISLANDER	4
SOME OTHER RACE	91

What is that?________________________________

SX28. [Are you/Is (PERSON)] of Hispanic origin?

YES	1
NO	2

Sampling Point:
Select children and adults for extended interviews.
If any children are selected, go to next box.
If adults only are selected, go to box after SX30.
If no one is selected, go to LINTRO.

Ask SX29 and SX30 for each sampled child.
If there is only 1 household member 12 years old or older, autocode SX29 to this adult.

SX29. We would like to ask some questions about (CHILD'S) (care and) education. [IF SCREENER RESPONDENT IS OBVIOUSLY CHILD'S MOTHER, INSTEAD OF READING QUESTION, VERIFY RELATIONSHIP AND ENTER HER PERSON NUMBER.] Who is the parent or guardian in this household who knows the most about (CHILD'S) (care and) education?
[DISPLAY HOUSEHOLD MEMBERS 12 AND OLDER.]

PERSON NUMBER . . . . ☐☐

SX30. What is [your/(CAREGIVER'S)] relationship to (CHILD)?

ERESRELN

MOTHER (BIRTH/ADOPTIVE/STEP/FOSTER)	1
FATHER (BIRTH/ADOPTIVE/STEP/FOSTER)	2
BROTHER/SISTER	3
GRANDPARENT	4
OTHER RELATIVE	5
NONRELATIVE	6

Ask SX31 for sampled adults other than the Screener respondent for whom AGE = 16 to 25, SX7 = 1 and SX9 = 15, 16, 17 (enrolled in college, graduate school or vocational/technical school after high school and age 16 to 25). Else, go to LINTRO.

SX31. Is (ADULT) living there, in student housing, or somewhere else?

HERE	1	(GO TO LINTRO)
STUDENT HOUSING [This includes all housing owned, sponsored, or leased by the school such as a dormitory or fraternity or sorority house.]	2	(GO TO SX32)
OTHER PRIVATE HOME OR APARTMENT	3	(INELIGIBLE)
INSTITUTION OR GROUP QUARTERS [THIS INCLUDES A JAIL OR DETENTION CENTER, MEDICAL FACILITY, REHABILITATION CENTER, MENTAL HEALTH FACILITY, MILITARY BARRACKS, OR GROUP FOSTER CARE.]	4	(INELIGIBLE)

SX32. Would you please give me (his/her) last name and telephone number so that we can call (him/her) to talk about (his/her) educational experiences?

LAST NAME____________________________________

PHONE______________________________________

1995 Topical component: Public library use

LINTRO. These next questions are about public libraries. This does not include school or college libraries, or special research libraries.

L1. About how far would you say it is from your home to the closest public library? Would you say...

Less than 1 mile,	1
1 or 2 miles,	2
3 to 5 miles,	3
6 to 10 miles,	4
11 to 25 miles, or	5
More than 25 miles?	6

L2. People use public libraries in a number of ways. In the past month, that is, since (MONTH) (DAY), [have you/has any member of your household] used a public library in the following ways? How about...

		YES	NO
a.	Going to a public library to borrow or drop off books or tapes, attend a lecture or story hour, use their equipment, or for any other purpose? . . .	1	2
b.	Visiting a bookmobile in person?	1	2
c.	Making a phone call to the public library to renew books or to ask for information, other than information about library hours or directions to the library?	1	2
d.	Linking to a public library by computer?	1	2
e.	Having library materials sent to you by mail or delivered to your home in person?	1	2

If L2a through L2e = No, ask L3. Else, go to L4.

L3. [Have you/Has anyone in your household] used a public library in any of those ways in the past year?

YES . . . . 1 (GO TO BOX AFTER L4)
NO . . . . 2 (GO TO BOX AFTER L4)

L4. In the past month, that is since (MONTH) (DAY), [have you/has any member of your household] used a public library for the following purposes? How about...

		YES	NO
a.	For a school or class assignment?	1	2
b.	[IF CHILD 6 TO 12 IN HOUSEHOLD] To attend a program or activity designed for children age 6 to 12?	1	2
c.	[IF CHILD UNDER 6 IN HOUSEHOLD] To attend a program or activity for children under 6 that introduces them to books and reading, including a story hour?	1	2
d.	To get books or tapes or attend (any other) events for enjoyment or for hobbies?	1	2
e.	To help find a job?	1	2
f.	For a work assignment or to keep up to date at work?	1	2
g.	For information about personal business such as consumer or health issues, home repairs, or investments?	1	2
h.	To work with a tutor or take a class to learn to read?	1	2

If any L2 a-e = yes (used services in last month), OR if L1 = 6 (>25 miles) and L3 = no (no services in last year), go to J1_P1. Else, ask L5.

L5. Have any of the following things kept you (and other members of your household) from using the services of a public library (more often)? How about...

		YES	NO
a.	Lack of information about public library services, materials, or programs?	1	2
b.	Lack of services, materials, or programs you are interested in?	1	2
c.	Inconvenient public library hours?	1	2
d.	Problems with getting help from library staff? . .	1	2
e.	A disability that limits access to the public library?	1	2
f.	Concern about the possible cost of fines or lost library materials?	1	2
g.	Lack of transportation, either public transportation, your own car, or someone to drive you?	1	2
h.	Lack of parking?	1	2
i.	Something else? (SPECIFY:_____________)	1	2

End of topical component

J1_P1. Now a few more questions about your household. Do you...

Own your home, ... 1
Rent your home, or 2
Have some other arrangement? 3

J2_P2. Besides (PHONE NUMBER), do you have other telephone numbers in your household?

YES . . . . 1 (GO TO J3_P3)
NO . . . . 2 (GO TO J4_P4)

J3_P3. How many of these additional telephone numbers are for home use?

NUMBER . . . . ☐☐

J4_P4. During the past 12 months, has your household ever been without telephone service for more than 24 hours?

YES	1	(GO TO J5_P5)
NO	2	(GO TO J6_P6)

J5_P5. What was the total amount of time your household was without telephone service in the past 12 months?

NUMBER . . . . ☐☐

DAYS	1
WEEKS	2
MONTHS	3

J6_P6. So that we can group households geographically, may I have your ZIP code?

ZIP CODE . . . . ☐☐☐☐☐

Ask J7_P7 if NUMKID10 (number of children age 10 or younger) >= 1. Else, go to J8_P8.

J7_P7. In the past 12 months, has your family received funds or services from any of the following programs? How about...

		YES	NO
a.	Women, Infants, and Children, or WIC?	1	2
b.	Food Stamps?	1	2
c.	AFDC, or Aid to Families with Dependent Children?	1	2

J8_P8. In studies like this, households are sometimes grouped according to income. What was the total income of all persons in your household over the past year, including salaries or other earnings, interest, retirement, and so on for all household members?

Was it...

$25,000 or less, or	1	(READ SET 1)
More than $25,000?	2	(READ SET 2)

Was it...

[SET 1]

$5,000 or less	1
$5,001 to $10,000	2
$10,001 to $15,000	3
$15,001 to $20,000, or	4
$20,001 to $25,000?	5

[SET 2]

$25,001 to $30,000	6
$30,001 to $35,000	7
$35,001 to $40,000	8
$40,001 to $50,000	9
$50,001 to $75,000, or	10
Over $75,000?	11

Ask J8OV_P8OV if
(Number in HH = 2 and HINCOME = 2) or
(Number in HH = 3 and HINCOME = 3) or
(Number in HH = 4 and HINCOME = 3) or
(Number in HH = 5 and HINCOME = 4) or
(Number in HH = 6 and HINCOME = 4) or
(Number in HH = 7 and HINCOME = 5) or
(Number in HH = 8 and HINCOME = 5) or
(Number in HH = 9 and HINCOME = 6) or
(Number in HH = 10 and HINCOME = 6) or
(Number in HH = 11 and HINCOME = 7) or
(Number in HH = 12 and HINCOME = 7).
Else, go to THANK2.

J8OV_P8OV. What was your total income last year, to the nearest thousand?

AMOUNT . . . . $☐☐,☐☐☐

Go to HHSELECT screen to select interview.

THANK1. Thank you, but we are only interviewing in private residences.

THANK2. Those are all the questions I have about your household. Thank you for your time.

NHES:95 Early Childhood Program Participation Interview

INTRO. [READ DISPLAY IF RESPONDENT WAS NOT SCREENER RESPONDENT:]
[Hello, this is (INTERVIEWER). I'm calling on behalf of the U.S. Department of Education. We are conducting a voluntary and confidential study about the educational experiences of young children.]
I'd like to talk with you now about (CHILD). These questions usually take about (10 to 15/10) minutes.

A1. [Before we begin, I'd like to confirm (his/her) age.] In what month and year was (CHILD) born?

CDOBMM
CDOBYY

MONTH ( ) YEAR ( )

1 JANUARY
2 FEBRUARY
3 MARCH
4 APRIL
5 MAY
6 JUNE
7 JULY
8 AUGUST
9 SEPTEMBER
10 OCTOBER
11 NOVEMBER
12 DECEMBER

Calculate AGE94 = child's age on December 31, 1994.
Calculate current age for display in A2.

A2. That would mean that (CHILD) [is (AGE)/turns (AGE) this month]. Is that right?

*

YES . . . . 1 (GO TO A3)
NO . . . . 2 (RETURN TO A1)

If AGE94 => 11, go to CLOSE1. Else, ask A3.

A3. Is (CHILD)...

CRACE
CRACEOS/R

White, ... 1
Black, ... 2
American Indian or Alaska Native, ... 3
Asian or Pacific Islander, or 4
Another race? 91
What is that?________________________________

NOTE: Response categories shown in mixed cases (upper and lower) are read to the respondent by the interviewer. Those shown in all upper case are not read. Those shown in italics were added during data cleaning (i.e., additional codes were created from among the "specify" responses.

NOTE: In general, variables designated by /R appear on the restricted file only. However, some variables with this designation contained no responses and therefore were not included on the restricted file. Please consult the Proprietary Data File User's Guide for a specification of which variables were excluded from the file.

NOTE: Questions designated by * do not appear on any data file. They were used for administrative, verification, or coding purposes only.

A4. Is (he/she) of Hispanic origin?

CHISPANI

YES	1
NO	2

If AGE94 => 2, ask A5. Else, go to RELINTRO.

A5. What language does (CHILD) speak most at home?

CHLDLANG
CHLDLAOS/R

ENGLISH	1
SPANISH	2
ANOTHER LANGUAGE SPECIFY________________	91
CHILD DOESN'T SPEAK	3

RELINTRO. [NOT READ IF ONLY ONE ADULT IN THE HOUSEHOLD.]
Now I'd like to ask how the people in your household are related to (CHILD).

If the respondent is the child's mother/father, copy RESPRELN into RELATION and ask A7/A8, then ask A6 for every other household member. If respondent is not the child's mother/father, copy RESPRELN into RELATION and ask A6 for every other household member. Else, for Screener R, copy RESPRELN into RELATION.

A6. [FOR EACH HOUSEHOLD MEMBER EXCEPT RESPONDENT:]
How is (PERSON) related to (CHILD)?
[VERIFY IF KNOWN]

RELATN1-
RELATN13

MOTHER (BIRTH/ADOPTIVE/STEP/FOSTER)	1	(GO TO A7)
FATHER (BIRTH/ADOPTIVE/STEP/FOSTER)	2	(GO TO A8)
BROTHERS AND SISTERS INCLUDING STEP, ADOPTED, AND FOSTER	3	(GO TO 1ST BOX BEFORE A9)
GRANDPARENT	4	(GO TO 1ST BOX BEFORE A9)
OTHER RELATIVE	5	(GO TO 1ST BOX BEFORE A9)
NONRELATIVE	6	(GO TO 1ST BOX BEFORE A9)

A7. [Are you/Is (PERSON)] (CHILD'S)...

MOMTYPE

Birth mother,	1
Adoptive mother,	2
Stepmother, or	3
Foster mother?	4

A8. [Are you/Is (PERSON)] (CHILD'S)...

DADTYPE

Birth father,	1
Adoptive father,	2
Stepfather, or	3
Foster father?	4

Set HHMOM:
1 = mother in household. 2 = no mom and no dad, female R. 3 = else.
Set HHDAD:
1 = father in household. 2 = no mom and no dad, male R. 3 = else.

Current School Status

If ECPP respondent was also the screener respondent, copy responses from the screener to A9, A10, A11, and A12 and follow the instructions below. Else, go to next box.

If A11 or A12 = 4 or 5, go to CLOSE1.
If A10 = 1 (home school), go to A13.
If AGE94 =< 2, go to 1st box after A19.
If AGE94 = 3 to 4 and A9 = 1 (enrolled), go to A19.
If AGE94 = 3 to 4 and A9 = 2 (not enrolled), go to 1st box after A19.
If AGE94 => 5 and A9 = 1 (enrolled) and A10 = 2, (not in home school), go to A14.
If AGE94 = 5 to 6 and A9 = 2 (not enrolled) and A10 = 2, (not in home school), go to A14.
Else, if AGE94 => 7 and A9 = 2 (not enrolled) and A10 = 2, (not in home school), go to CLOSE1.

If AGE94 => 3, ask A9. Else, go to 1st box after A19.

A9. Now I'd like to talk with you about (CHILD'S) school experiences. Is (CHILD) attending (school/nursery school, kindergarten, or school)?

ENROLL

YES	1	(GO TO BOX)
NO	2	(GO TO BOX)

If AGE94 => 5, ask A10.
If AGE94 = 3 to 4 and A9=1 (enrolled), go to A11.
Else, if AGE94 = 3 to 4 and A9 = 2 (not enrolled) go to 1st box after A19.

A10. Some parents decide to educate their children at home rather than sending them to school. Is (CHILD) being schooled at home?

HOMESCHL

YES	1	(GO TO BOX)
NO	2	(GO TO BOX)

If A10 = 1 (home school), go to A12.
If A9 = 1 (enrolled) and A10 = 2, (not in home school) ask A11.
If AGE94 = 5 to 6 and A9 = 2 (not enrolled) and A10 = 2, (not in home school), go to A14.
Else, if AGE94 => 7 and A9 = 2 (not enrolled) and A10 = 2, (not in home school), go to CLOSE1.

A11. What grade or year is (CHILD) attending?
[PROBE FOR T OR P: Is that before or after kindergarten?]

GRADE

NURSERY/PRESCHOOL/PREKINDERGARTEN/HEAD START	N	(GO TO BOX AFTER A12)
TRANSITIONAL KINDERGARTEN (BEFORE K)	T	(GO TO BOX AFTER A12)
KINDERGARTEN	K	(GO TO BOX AFTER A12)
PREFIRST GRADE (AFTER K)	P	(GO TO BOX AFTER A12)
FIRST GRADE	1	(GO TO BOX AFTER A12)
SECOND GRADE	2	(GO TO BOX AFTER A12)
THIRD GRADE	3	(GO TO BOX AFTER A12)
FOURTH GRADE	4	(GO TO CLOSE1)
FIFTH GRADE OR HIGHER	5	(GO TO CLOSE1)
UNGRADED	U	(GO TO A12)
SPECIAL EDUCATION	S	(GO TO A12)

[IF T: In this interview we will be referring to that as "kindergarten."
IF P: In this interview, we will be referring to that as "prefirst grade."]

A12. What grade would (CHILD) be in if (he/she) were [attending school/attending a school with regular grades]?
[PROBE FOR T OR P: Is that before or after kindergarten?]

GRADEEQ

NURSERY/PRESCHOOL/PREKINDERGARTEN/HEAD START	N	(GO TO BOX)
TRANSITIONAL KINDERGARTEN (BEFORE K)	T	(GO TO BOX)
KINDERGARTEN	K	(GO TO BOX)
PREFIRST GRADE (AFTER K)	P	(GO TO BOX)
FIRST GRADE	1	(GO TO BOX)
SECOND GRADE	2	(GO TO BOX)
THIRD GRADE	3	(GO TO BOX)
FOURTH GRADE	4	(GO TO CLOSE1)
FIFTH GRADE OR HIGHER	5	(GO TO CLOSE1)
UNGRADED, NO EQUIVALENT	U	(GO TO BOX)

[IF T: In this interview we will be referring to that as "kindergarten."
IF P: In this interview, we will be referring to that as "prefirst grade."]

If AGE94 = 3 to 4 and A9 = 1 (enrolled), go to A19.
If A10 = 1 (home school), ask A13.
Else, go to A14.

A13. (I have a few more questions about (CHILD'S) schooling.) Has (CHILD) ever attended a public or private school other than home school?

EVRSCHL

YES	1	(GO TO BOX AFTER A14)
NO	2	(GO TO 1ST BOX AFTER A18)

A14. (I have a few more questions about (CHILD'S) schooling. I mentioned earlier that some parents decide to educate their children at home rather than sending them to school.) Since turning 5 years old, has (CHILD) ever been schooled at home instead of attending a public or private school?

EVRHOME

YES	1	(GO TO BOX)
NO	2	(GO TO 1ST BOX AFTER A18)

If A13 = 1 (ever attended a school) or A14 = 1 (ever home schooled), ask A15. Else, go to 1st box after A18.

A15. (Now I would like to talk with you about each of the grades (CHILD) has ever attended. For each grade, I would like to know whether (he/she) went to a school or was home schooled for the whole grade, or whether (he/she) spent part of the grade in school and part being home schooled. Let's start with kindergarten.)

HOMEK

For kindergarten, (did/has) (CHILD) only (go/gone) to a school, (was/has) (he/she) only (been) home schooled, or (did/has) (he/she) [do both/spent part of kindergarten in school and part being home schooled]?

ONLY SCHOOL	1
ONLY HOME SCHOOL	2
BOTH	3
DID NOT ATTEND KINDERGARTEN	4

If A11 or A12 = 1, 2, or 3 (grade/equivalent is first, second, or third), ask A16. Else, go to 1st box after A18.

A16. For first grade, (did/has) (CHILD) only (go/gone) to a school, (was/has) (he/she) only (been) home schooled, or (did/has) (he/she) (do/done) both?

HOME1

ONLY SCHOOL	1
ONLY HOME SCHOOL	2
BOTH	3
DID NOT ATTEND FIRST GRADE	4

If A11 or A12 = 2 or 3 (grade/equivalent is second or third), ask A17. Else, go to 1st box after A18.

A17. For second grade, (did/has) (CHILD) only (go/gone) to a school, (was/has) (he/she) only (been) home schooled, or (did/has) (he/she) (do/done) both?

HOME2

ONLY SCHOOL	1
ONLY HOME SCHOOL	2
BOTH	3
DID NOT ATTEND SECOND GRADE	4

If A11 or A12 = 3 (grade/equivalent is third), ask A18.
Else, go to 1st box after A18.

A18. For third grade, has (CHILD) only gone to a school, has (he/she) only been home schooled, or has (he/she) done both?

HOME3

ONLY SCHOOL	1
ONLY HOME SCHOOL	2
BOTH	3

If AGE94 = 5 to 6 and A9 = 2 (not enrolled) and A10 = 2 (not in home school), go to 1st box after A19.
Else, go to next box.

If A10 = 1 (home school), go to first box after A19.
Else, ask A19.

A19. What grade or year of school, if any, was (CHILD) attending one year ago, that is, in (MONTH) (YEAR)?
[PROBE FOR T OR P: Is that before or after kindergarten?]
[DISPLAY UP TO CURRENT GRADE ONLY]

LASTGRAD

NOT ENROLLED LAST YEAR	0
NURSERY/PRESCHOOL/PREKINDERGARTEN/HEAD START	N
TRANSITIONAL KINDERGARTEN (BEFORE K)	T
KINDERGARTEN	K
PREFIRST GRADE (AFTER K)	P
FIRST GRADE	1
SECOND GRADE	2
THIRD GRADE	3
UNGRADED	U

Set ECPATH:

I = AGE94 = 0 to 2 (Infants/Toddlers)

N = AGE94 => 3 and [(A11/A12 (grade/equivalent) = N) OR (A9 = 2 (not enrolled) and A10 NE 1 (not in home school))] (Preschoolers)
AGE94 = 3, 4, or 5, and A12 (grade equivalent) = U, and A10 NE 1 (not in home school) (Preschoolers)
AGE94 => 5 and A10 = 1 and A11/A12 = N (Preschoolers)

K = A11/A12 (grade/equivalent) = T, K, P, and A10 NE 1 (not in home school) (Kindergartners)

S = A11/A12 (grade/equivalent) = 1, 2, 3, and A10 NE 1 (not in home school) (Primary)
AGE94 => 6, and A12 (grade equivalent) = U, and A10 NE 1 (not in home school) (Primary)

H = AGE94 => 5 and A10 = 1 (home school) and A11/A12 (grade/equivalent) NE N (Home schoolers)

If ECPATH = I, N, or H, go to ECINTRO.
Else, if ECPATH = K or S, go to KINTRO.

Kindergarten History and Experience

KINTRO. Now I'd like to talk with you about (CHILD'S) kindergarten experiences.

If A11 or A12 (grade or equivalent) = T or K, go to B2 and autocode B1 = 1. If A19 (grade last year) = T or K, go to B2 and autocode B1 = 1. If ECPATH = S and A15=4 (did not attend kindergarten), autocode B1 = 2 and go to PINTRO. Else, if A11 or A12 (grade or equivalent) = P or ECPATH = S, ask B1.

B1. Did (CHILD) attend kindergarten before (prefirst grade/first grade)?

ATNDKIND

YES 1
NO 2

If ECPATH = S and (A15 = 2 or B1 = 2) (child was in home school for kindergarten or did not attend kindergarten), go to PINTRO.
If A11/A12 (grade/equivalent) = P and B1 = 2, (did not attend kindergarten), go to B3. Else, ask B2.

B2. Most school districts have guidelines about when a child can start school based upon his or her birth date. Did you enroll (CHILD) in kindergarten when (he/she) was old enough based on (his/her) birth date, or did you wait until (he/she) was older?

KPWAIT

WHEN OLD ENOUGH	1
WAITED	2
ENTERED EARLY	3

B3. How oid was (CHILD) in years and months when (he/she) first started (kindergarten/prefirst grade)?

KPAGEYR
KPAGEMO

YEARS ( ) MONTHS ( )

> *If ECPATH = K and A19 ne T, K, P (did not attend kindergarten last year), go to B6.*
> *If ECPATH = K and A19 = T, K, P (did attend kindergarten last year), go to B5. Else, if ECPATH = S, ask B4.*

B4. Did (CHILD) attend one or two years of kindergarten?

KPYRS

Parent Preferences

> *Ask I1 only if D1, E1, F1, G1, or G5 = 1 (child currently participates in at least one arrangement). Ask I1 only once per household for all children in ECPATH = I or N and for all children in ECPATH = K, S, or H.*

I1. I'm going to read some things that people look for in selecting child care arrangements or (early childhood/before or after school) programs. For each one, please tell me if you think it is very important, somewhat important, or not important in selecting (an/a before or after school) arrangement for (CHILD). How about...
[RANDOM START FOR RESPONSE CATEGORIES]

		VI	SI	NI
PPTRAIN	a. A caregiver who has special training in taking care of children. Is that	1	2	3
PPSICK	b. A place where children will be cared for when they are sick. Is that	1	2	3
PPCONV	c. A place close to your home. Is that	1	2	3
PPCOST	d. A reasonable cost. Is that	1	2	3
PPKIDS	e. A small number of children in the same class or group. Is that	1	2	3
PPENGL	f. A caregiver or teacher who speaks English with your child. Is that	1	2	3

NOTE: Item H1 allowed interviewers to: 1) correct the location and the number of days and hours for all arrangements, as well as correct the type of relative caregiver, whether an arrangement takes place before or after school, and whether a Head Start program is for a full or part day; 2) identify any duplicate arrangements so that one could be deleted; and 3) add arrangements that should have been reported earlier. If another arrangement was added, the CATI system cycled through the appropriate set of questions (e.g., relative, nonrelative, center) to collect relevant items.

Self-Care: Primary School Children Only

If ECPATH = S, ask J1. Else, go to K1.

HDDELAY	YES	1
	NO	2

If AGE94 => 3, ask M4. Else, if AGE94 =< 2, go to M6.

M4. Does (CHILD) have any of the following disabilities?
[RANDOM START; KEEP E AND F, G AND H TOGETHER; KEEP J LAST.]

			YES	NO
HDLEARN	a.	A specific learning disability?	1	2
HDRETARD	b.	Mental retardation?	1	2
HDSPEECH	c.	A speech impairment?	1	2
HDDISTRB	d.	A serious emotional disturbance?	1	2
HDDEAF	e.	Deafness?	1	2
HDHEAR	f.	[DO NOT DISPLAY IF e = 1] Another hearing impairment?	1	2
HDBLIND	g.	Blindness?	1	2
HDVISUAL	h.	[DO NOT DISPLAY IF g = 1] Another visual impairment?	1	2
HDORTHO	i.	An orthopedic impairment?	1	2
HDOTHER	j.	Another health impairment lasting 6 months or more?	1	2

If any M4a-j = 1, ask M5.
Else, go to box after M6.

M5. (Does/Do) (CHILD'S) (disability/disabilities) affect (his/her) ability to learn?

HDAFFECT

YES	1
NO	2

If AGE94 = > 3, go to box after M6. Else, ask M6.

M6. Does (CHILD) have any of the following disabilities?
[RANDOM START; KEEP A AND B, C AND D TOGETHER; KEEP G LAST.]

			YES	NO
HDDEAF	a.	Deafness?	1	2
HDHEAR	b.	[DO NOT DISPLAY IF a = 1] Another hearing impairment?	1	2
HDBLIND	c.	Blindness?	1	2
HDVISUAL	d.	[DO NOT DISPLAY IF c = 1] Another visual impairment?	1	2
HDORTHO	e.	An orthopedic impairment?	1	2
HDDEVEL	f.	Severe developmental delay?	1	2
HDOTHER	g.	Another health impairment (lasting 6 months or more)?	1	2

If AGE94 = > 3 and any M4a-j = 1, ask M7.
If AGE94 = < 2 and any M6a-g = 1, ask M8.
Else, go to LFINTRO.

M7. Is (CHILD) receiving services for (his/her) (disability/disabilities) from...

			YES	NO
HDSCHL	a.	Your local school district?	1	2
HDGOVT	b.	A state or local health or social service agency?	1	2
HDDOCTOR	c.	A doctor or clinic	1	2
HDSOURCE	d.	Some other source?	1	2
HDSOUROS/R		What is that?____________________________		

If M7a-d all = 2, go to LFINTRO. Else, go to next box.

M8. Is (CHILD) receiving services for (his/her) (disability/disabilities)...

			YES	NO
HDIFSP	a.	Through an Individualized Family Service Plan, or IFSP?	1	2
HDINFSRC	b.	From any other source?	1	2
HDINFSOS/R		What is that?____________________________		

If M8a = 2 and M8b = 2 (child does not receive services)
go to LFINTRO.
Else, go to next box.

If ECPATH = K or S go to M12.
If ECPATH = H, go to LFINTRO.
If F1 = 1 (child attends Head Start), ask M9.
Else, go to box after M9.

M9. Does the Head Start program (CHILD) attends coordinate or provide those services?

HDHEAD

YES 1
NO 2

If ECPATH = I or N and G1 = 1 (child attends a day
care center, nursery school, or preschool), ask M10.
Else, go to box after M11.

M10. (Does the/Do any of the) day care center(s), nursery school(s), or preschool(s) (CHILD) attends coordinate or provide those services?

HDCENT

YES 1
NO 2

If M10 = 1 and child has more than one center-based
arrangement, ask M11.
If M10 = 1 and child attends only one center-based
program, autocode M11 to equal that center.
Else, go to box after M11.

M11. Which centers or programs coordinate or provide those services?
[MARK ALL THAT APPLY.]

HDSERV1-
HDSERV3

[DISPLAY ALL CENTER-BASED ARRANGEMENTS:]
(ARRANGEMENT 1: LOCATION; DAYS & HOURS/WEEK)
(ARRANGEMENT 2: LOCATION; DAYS & HOURS/WEEK)
(ARRANGEMENT 3: LOCATION; DAYS & HOURS/WEEK)

If ECPATH = K or S, ask M12.
If ECPATH = I, N and F1 = 1 or G1 = 1 (child attends
Head Start or a day care center,
nursery school, or preschool), ask M12.
Else, go to LFINTRO.

NOTE: The HDSERV variables at item M11 indicate whether center-based programs reported for children with disabilities provide services. Since a maximum of three centers were reported for any child, there are three HDSERV variables on the file. HDSERV1 indicates whether the first-reported center provides services (1 = yes, 2 = no); HDSERV2 indicates whether the second-reported center (if any) provides services; and HDSERV3 indicates whether the third-reported center (if any) provides services.

M12. [ASK IF M9 = 1 AND FOR EACH ARRANGEMENT IN M11.]
Do all of the children in (CHILD'S) (class at school/room or group at) (the Head Start program/the program/ARRANGEMENT#) have disabling conditions, or is (he/she) in a mixed (class/group) with some children who have disabilities and some who don't?

CHMIX
HDMIX
CPMIX1-
CPMIX3

ALL HAVE DISABILITIES 1
SOME DO, SOME DON'T 2

> *If M12 = 2, ask M13. Else, ask M12 for next center-based arrangement or go to LFINTRO.*

M13. Does (CHILD) usually spend all of (his/her) time in the mixed (class/group), or does (he/she) sometimes leave the (class/group) for separate services or instruction?

CHMIXALL
HDMIXALL
CPMIXAL1-
CPMIXAL3

SPENDS ALL TIME IN THE MIXED CLASS/GROUP 1
SOMETIMES LEAVES THE MIXED CLASS/GROUP 2

> *The mother and father sections are asked only once per mother and father in the household.*

Parent/Guardian Characteristics

LFINTRO. Now I have some questions about [(you) (and) (CHILD'S) (mother/stepmother/foster mother) (and) (father/stepfather/foster father)]. [Let's start with (you/(CHILD'S) mother).]

Mother Items

> *If HHMOM = 1 or 2 (mother or female guardian), ask N1. Else, if HHMOM = 3 (no mother/female guardian), go to box before O1.*

N1. What is [your/(CHILD'S) (mother's/stepmother's/foster mother's)] marital status?

MOMSTAT

MARRIED/REMARRIED 1
SEPARATED 2
DIVORCED 3
WIDOWED 4
NEVER MARRIED 5

N2. How old (were you/was (CHILD'S) (mother/stepmother/foster mother) when (you/she) first became a mother, stepmother, or guardian to any child?

MOMNEW

YEARS . . . . ☐☐

NOTE: Items M12 and M13 are asked of several different types of children with disabilities. CHMIX and CHMIXALL apply to classes at school for kindergartners or primary schoolers; HDMIX and HDMIXALL apply to classes or groups at Head Start programs that provide services (i.e., when HDHEAD = yes); and CPMIX1, CPMIXAL1, CPMIX2, CPMIXAL2, and CPMIX3, CPMIXAL3 apply to the classes or groups at the first-, second-, and third-reported center-based programs that provide services (i.e., when HDSERV1, HDSERV2, or HDSERV3 = yes).

[REFERS TO ACTUAL TIME NOT CREDIT HOURS.]

DADENHRS	HOURS	☐☐

The following questions are asked only once per household.

Household Characteristics

HHINTRO. Finally, a few questions about your household.

P1. Do you...

	Own your home,	1
HOWNHOME	Rent your home, or	2
	Have some other arrangement?	3

P2. Besides (PHONE NUMBER), do you have other telephone numbers in your household?

HOTHNUM	YES	1	(GO TO P3)
	NO	2	(GO TO P4)

P3. How many of these additional telephone numbers are for home use?

HNUMUSE	NUMBER	☐

P4. During the past 12 months, has your household ever been without telephone service for more than 24 hours?

HPHONSVC

YES . . . . 1 (GO TO P5)
NO . . . . 2 (GO TO P6)

P5. What was the total amount of time your household was without telephone service in the past 12 months?

HSVCNUM

NUMBER . . . . ☐☐

HSVCUNIT

DAYS 1
WEEKS 2
MONTHS 3

P6. So that we can group households geographically, may I have your ZIP code?

HZIPCODE/R

ZIP CODE . . . . ☐☐☐☐☐

P7. In the past 12 months, has your family received funds or services from any of the following programs? How about...

			YES	NO
HWIC	a.	Women, Infants, and Children, or WIC?	1	2
HFOODST	b.	Food Stamps?	1	2
HAFDC	c.	AFDC, or Aid to Families with Dependent Children?	1	2

P8. In studies like this, households are sometimes grouped according to income. What was the total income of all persons in your household over the past year, including salaries or other earnings, interest, retirement, and so on for all household members.

HINCMRNG

Was it....

$25,000 or less, or . . . . 1 (READ SET 1)
More than $25,000? . . . . 2 (READ SET 2)

HINCOME

Was it...

[SET 1]
$5,000 or less, ... 1
$5,001 to $10,000, ... 2
$10,001 to $15,000, ... 3
$15,001 to $20,000, or 4
$20,001 to $25,000? 5

[SET 2]
$25,001 to $30,000, ... 6
$30,001 to $35,000, ... 7
$35,001 to $40,000, ... 8
$40,001 to $50,000, ... 9
$50,001 to $75,000, or 10
Over $75,000? 11

Ask P8OV if
(Number in HH = 2 and HINCOME = 2) or
(Number in HH = 3 and HINCOME = 3) or
(Number in HH = 4 and HINCOME = 3) or
(Number in HH = 5 and HINCOME = 4) or
(Number in HH = 6 and HINCOME = 4) or

EARLY CHILDHOOD PROGRAM PARTICIPATION CODEBOOK

EARLY CHILDHOOD PROGRAM PARTICIPATION CODEBOOK

This section of the manual contains the codebook for the NHES:95 Early Childhood Program Participation (ECPP) public use data file. Prior to using the codebook and data file, readers should review chapter 6, Guide to the Data File and Codebook, and chapter 7, Data Considerations and Anomalies. Both of those chapters provide information that will make it easier for analysts to understand the layout of the data file and the variables that have been included.

For each data element, the question, variable label, file location, format, codes, value labels, frequency, unweighted percents, and weighted percents are presented. Readers should review figure 6-1 on page 56 and the accompanying text for a detailed description of the codebook entries. As the reader will see in reviewing that section, standard formats have been used, and the same inapplicable code (-1) is used for all variables.

A key variable for the use and management of the ECPP file is **MAINRSLT** (main result), the completion code for the interview. This variable reflects the interview type in terms of the population of children to which the subject child belongs. It can be used to subset the data for analysis. The numbers of cases for each value of MAINRSLT are shown below.

CH -	Home school interview	101
CI -	Infant/toddler interview	4,135
CK -	Kindergarten interview	1,680
CN -	Preschool interview	3,431
CS -	Primary school interview	4,717

The data file contains several types of variables that are useful for analytical and methodological applications. The list below indicates the types of variables, the page of the text on which a discussion of the variable type begins, and the codebook pages on which the variables can be found.

Variable set	**Text Discussion**	**Codebook pages**
System variables (includes ID)	Ch. 6, pp. 41	D-3
Household composition	Ch. 6, pp. 42	D-3 to D-11
Questionnaire items	Ch. 6, pp. 44	D-11 to D-146
Derived variables	Ch. 6, pp. 45	D-147 to D-152
Weights, PSU, STRATUM	Ch. 6, pp. 54	D-152 to D-158
Imputation flags	Ch. 6, pp. 54	D-158 to D-252
Other flags	Ch. 6, pp. 55	D-252

In every survey, there are some apparent anomalies in the data. Such anomalies may occur because of reporting or recording error, but may also occur because respondents may report rare situations not normally anticipated. Chapter 7 of the text describes some real and apparent anomalies in the NHES:95 ECPP data, as well as some data considerations that could be important for some analyses. Data users wishing to better understand the ECPP data should review chapter 7.
